

DAIRY HERD ANALYSIS REPORT
KFBM COOPERATORS
2009 Preliminary Analysis

This spreadsheet shows production data for average Kentucky dairies participating in the KFBM program. Production data is group topped to bottom into Returns, Value of Feed Fed, Pounds of Feed Fed, and Herd Production. Herd Production is for the whole farm. The other data is presented across the page for the Average Farm, Per Cow, Per Cwt Produced, and Per Cow Per Day.

Cell B6 is highlighted in yellow. This allows the user to select the size of dairy desired. The following entries will produce Dairy Herd data for the following size dairies:

<u>Enter</u>	<u>Herd Size</u>
1	All KY Dairies
2	<100 Cows
3	100-199 Cows
4	>200 Cows

Note that entering any number besides 2-4 will default to All KY Dairies.

The DAIRY HERD ANALYSIS REPORT data corresponds to the Dairy Size Safe Comparison for small and medium sized dairies. There is one extra dairy in the 200+ herd size Dairy Herd Analysis that is not included in the Dairy Size Safe Comparison. That makes the All KY Dairies differ by one farm as well.
