The number of wineries in the Ohio Valley and Mid-South continues to grow. Many existing wineries are also preparing to expand capacity and production in the near term. Responses to a survey from 87 of 331 wineries located in Illinois, Indiana, Kentucky, Missouri, Ohio, Tennessee and Virginia, indicate that grape prices paid in these states will likely remain steady in 2006, with some small increases expected in certain vinifera and a few French hybrid varieties.

**Increasing Capacity and Production Expected**

The survey, the second conducted by the University of Kentucky New Crop Opportunities Center, indicates that wine production capacity in these states will continue to increase, with 62% of the respondents indicating some degree of capital improvements planned for 2006 and 59% expecting to increase their wine production over 2005. This increase is uniformly noted among the wineries surveyed, regardless of location or winery size. The largest number of wineries reported an expectation to make major capital improvements to expand capacity.

Note: Smaller wineries were those producing less than 3000 cases. Seven additional wineries responded but did not report volume.

While this increase in capacity and production could create market opportunities for grape growers in the region, the survey report cautions that significant grape plantings in the Midwest could create a future market glut for some winegrape varieties.
Trends in Sourcing Grapes
This survey gathered data that looked at marketing activities and winery-grower relationships. A significant number of the wineries in this region purchased grapes (71%) to supplement their own production in 2005. This was not surprising, given the relatively small scale of production generally.

Many wineries continue to look regionally for grapes. Many (44%) purchased grapes from beyond their local state to supplement their local supply. The average winery in this sample grew 14.8 acres of grapes. Only 11 wineries reported having over 25 bearing acres.

Table 2 shows the pattern in the procurement of grapes by these wineries. The majority rely substantially on their own vineyards, but contracting and, to a lesser extent, purchasing on the spot market is widely practiced. The larger wineries appear to be more inclined to look outside their own operation to find the grapes they need.

Many wineries have cited the need for certain varieties that may be difficult to grow at their current location. Many of their markets are built on having a variety of wines available. Outsourcing certain varieties or supplementing shortfalls in existing production are common practices.

Winery and Grower Business Relations
Winery owners tend to work closely with their growers, particularly in sharing viticultural expertise and assisting with varietal selection. General sharing of industry information, marketing and production information is also fairly common. There is less direct involvement in the capital and business aspects of the grower’s business. Such close interactions are characteristic of the wine industry, reflecting the high level of investment, the long term nature of the business, and the sensitivity to quality by all involved. A summary of winery and grower business interaction is summarized in Table 3.

1 Winery operators were asked to indicated “How do you relate to your primary grower suppliers? Each function could involve a reply of “not practical”, “sometimes”, or “often”.

Winery Marketing Approaches
Most of the wineries in the region use a tasting room and have on-premise retail sales. While the list of marketing approaches is by no means a comprehensive list of marketing strategies, the responses to alternative strategies suggests that wholesaling and off-premise selling is much less common. Most of the marketing focus is on direct sales. Few of the wineries are of adequate size to be significantly focused on wholesale markets or extensive distribution. Still, based on the widespread indication that they will be expanding facilities, capacity, and production, the wineries generally seem to be enjoying profitable and growing opportunities in the markets they are targeting.

Price Report
Average prices paid for the most commonly purchased varieties did not differ significantly between the 62 wineries purchasing 50% or more of their grapes from in-state sources and the 23 wineries making less than 50% of their grape purchases in-state. In fact, both mean and median prices paid by variety are nearly identical between these two groups of wineries. This suggests that the prices reported here are sound indicators of prices paid in this region and are not skewed by prices paid for out-of-state or out-of-region grapes.

Grape prices paid in the region have generally increased for most varieties since the survey of the 2003 season. Prices for the American varieties have remained close to the same. The French hybrid varieties have increased slightly. Prices for the vinifera varieties have increased substantially over the two years. Table 5 summarizes the prices paid during that earlier time. Table 6 summarizes prices paid for the 2005 season and expectations regarding prices changes in the near term.

Price increases for Shiraz, Vignoles, Traminette, and Seyval were expected by more than 15% of wineries purchasing these varieties. Only Chardonel was expected to decrease by any significant number of wineries surveyed. The majority of wineries expected prices to remain stable in 2006 for each of the varieties considered here.

The most common varieties purchased by the wineries responding to this survey were Chambourcin and Vidal blanc. There was also a strong overall demand reported for vinifera varieties in all states except Missouri.

It’s important to note here that many wineries reported wide ranges in prices paid, even within season. Differences in quality, in-season demand, and grower relationships all are major factors behind these price differences. Contracting and spot market purchases are not universally practiced and, again, many smaller wineries grow all their own grapes. These prices are intended to provide the industry with the general sense of demand, market interest, and relative value by variety. Growers selling to other wineries can incorporate this information into their own production planning.

Conclusion
This price survey supplies grape growers and buyers in the region with a sample of common prices paid for winegrapes. The results indicate that winegrape prices for 2006 will probably hold steady from 2005 levels while wine production in the states surveyed (IL, IN, KY, MO, OH, TN, VA) will continue to increase. Continued expansion of bearing grape acreage in these states may lead to steady, if not lower, prices paid by wineries for most grape varieties in coming seasons, although many wineries are expanding their own future production capacity.

Acknowledgements
The author expresses thanks to all the wineries that responded to this survey. Local industry and Extension professional in each state greatly assisted in the development and distribution of this survey.
