

## FOR 100 Worksheet: Chapter 8 – Forest Pathology

Place a “D” on the line in front of each agent that is a direct cause of disease in forest trees. Leave the line blank in front of each agent that does not directly cause disease in forest trees.

\_\_\_\_\_ Viruses

\_\_\_\_\_ Bacteria

\_\_\_\_\_ Tornadoes

\_\_\_\_\_ Parasitic plants

\_\_\_\_\_ Nematodes

\_\_\_\_\_ Fire

\_\_\_\_\_ Hurricanes

\_\_\_\_\_ Fungi

T    F    The impact of tree diseases in forests is negligible.

T    F    Of the agents that cause tree diseases, fungi are the most destructive.

T    F    Because tree diseases in forests cannot generally be “cured,” foresters do not consider these diseases when making decisions.
