

FOR 100 Worksheet:

Chapter 13 – Applied Silviculture for Kentucky Woodlands

1. **T F** Veneer is a high-value wood product.
2. **T F** Foresters produce straight trees with clear bark by managing for high density stands while forests are young.
3. **T F** Tree size can be increased, while still maintaining veneer-quality straightness and bark clarity, by thinning stands after trees have reached sufficient height.
4. **T F** Which species regenerate a stand is affected by the amount of light at the forest floor, which foresters can control by manipulating the canopy.
5. **T F** A good way to minimize tree rot is to protect trees from causes of damage, such as fire, grazing, and unmanaged selective timber harvests.

6. List 5 important characteristics possessed by veneer-quality trees.
