Abstract

In order to maximize partner violence victims' economic security by reducing the risks associated with the negative effects of partner violence on women's labor force participation and on workplaces, the first step is to clearly understand the consequences of intimate partner violence on female victims' employment and on employers. To this end, this special edition presents an interdisciplinary perspective on the intersections of intimate partner violence, women's employment and workplaces.

Keywords: *battered women, employment, intimate partner violence, women, working*
