Memorandum

TO: David Watt, Associate Provost for Academic Affairs

FR: Sharon R. Stewart, Associate Dean for Academic Affairs

RE: *Transitional* Doctor of Physical Therapy Program (DPT): A Track within the Professional DPT

I am attaching the proposal for the *Transitional* Doctor of Physical Therapy Program for consideration. This program was approved by a majority of the members of the CHS Academic Affairs Committee, and I support the proposal. Based on my conversations with the Program Director and the Dean, we are confident that sufficient resources are available to offer this track.

The Doctor of Physical Therapy (DPT) Program was recently approved by the Council on Post-Secondary Education and will be implemented in Fall 2006. The purpose of the present proposal for the *Transitional* Doctor of Physical Therapy Program is to offer a *post-professional* DPT track within the existing DPT degree. In other words, the professional DPT degree program will be the entry-level degree for individuals training to be physical therapists, while the *Transitional* DPT will be for individuals who *are* practicing physical therapists. The *Transitional* program would be available for currently licensed physical therapists who have already attained the equivalent of a masters level education.

The UK DPT program will be the only DPT program offered at a public institution in Kentucky. The addition of the *Transitional* DPT would give physical therapists in Kentucky and beyond access to the necessary education to progress to the clinical doctorate level. The only other physical therapy program in the state is located at a private institution in Louisville. That program currently offers training for both the professional entry-level DPT degree and the *Transitional* DPT degree. It should be noted that a variety of programs around the nation offer both the DPT also offer a *transitional* DPT.

The attached proposal provides detail about the planned program. For additional information, please contact: Anne Harrison (3-1100, ext 80596) or Terry Malone (3-1100, ext. 80600).

Text from email sent on 11/02/2005 to the Dean's office from the CHS Academic Affairs Committee.

The Academic Affairs Committee has reviewed the latest version of the Transitional-DPT proposal. While there is not unanimous approval for this proposal, there is a two-thirds majority in favor of the proposal.

The following frequently asked questions are provided to enable a context for the transitional DPT proposal.

Transitional DPT – Frequently Asked Questions

1. *What is the transitional DPT degree?*

The transitional DPT is awarded after completion of a postprofessional educational experience designed to augment the knowledge, skills, and clinical process of the practicing therapist to a level consistent with the current professional (entry-level) DPT standards. It enables the US-licensed physical therapist to attain degree parity with graduates who hold the professional DPT by completing experiences to mirror newly added coursework which was not a part of their previous professional training. The majority of PT programs in the United States are now awarding the DPT as the professional (entry-level) degree.

2. *Why is there the need for this Program/degree?*

During the last 10 years, the majority of physical therapists have graduated from MSPT or MPT programs. The University of Kentucky will have approximately 600 MSPT graduates with more than 70% residing in the Kentucky region. Since these MS/MPT graduates have the projection of a long professional career, many are interested in gaining degree parity with recent and future professional graduates.

3. *What is the difference between the transitional DPT and a PhD?*

The DPT is considered a clinical doctorate very similar to pharmacy (Pharm D), optometry (OD), podiatry (DPM) and clinical psychology (PsyD). Thus the degree signifies a level of clinical competence. The PhD is a research degree indicative of knowledge acquisition in a particular field and completion of original scholarly work adding to the body of knowledge in a specific discipline.

4. *What is a transitional DPT program?*

The DPT post-professional transitional program allows the US licensed therapist to obtain the clinical doctorate through a structured post-professional education process providing the requisite educational experiences giving information commensurate with that of current professional DPT program outcomes. Typically these programs rely on distance/distributive learning to facilitate part-time enrollment. Most programs are designed to complement the curricular changes made during the move from the institution's MS or MPT program to the professional DPT. As a result, the content of the post-professional transitional degree reflects what was added to the DPT. The mode of transmission is frequently a combination of on campus activity, individual projects and modules, and on-line experiences. The length and orientation of these programs is quite varied with as few as 6 credit hours or many as 30, depending on what the transition from MS/MPT to DPT required.

5. *Where are transitional DPT programs located?*

The majority of these programs are housed at universities which have accredited professional DPT programs. A very small number have been developed by other institutions which have added a free-standing transitional DPT not linked to an existing professional DPT.

6. *How long will transitional DPT programs exist?*

Most professional leaders and academic physical therapists predict that these programs will only be needed for approximately 10 or fewer years. After that time, all new graduates will have the DPT from their professional program.

7. *How has the UK transitional DPT been designed?*

The UK DPT Program has 120 semester hours in contrast to the 100 semester hour MSPT it replaced. The changes include 11 hours of additional didactic coursework and 9 hours (12 weeks) of additional clinical experiences. The UK Physical Therapy faculty members have carefully constructed a transitional sequence of 14 semester hours to enable the graduate physical therapist to attain the additional content. As these individuals are all practicing therapists, the 9 hours of additional clinical experiences are being met through ongoing employment as a physical therapist.

8. *What will be the “backgrounds” of these students?*

It is anticipated that most of these students will be relatively recent graduates of accredited professional physical therapy programs. Thus they typically will have completed a minimum of 90 semester hours of pre-professional and university studies requirements followed by a 100 hour MS/MPT professional program of study. They will be practicing physical therapists wishing to achieve degree parity as well as enhancing their skill set.

9. *Why not just take the new “classes” with the professional DPT students?*

The added didactic materials were integrated into existing courses and are a part of several different semester sequences enhancing course flow. Also, the professional students participate in a full-time, day program format which would prohibit attendance by practicing clinicians. Thus the UK physical therapy faculty created the transitional courses to provide the graduate physical therapist educational experiences consistent with the added didactic materials - and in a format to accommodate the working professional.

10. *How does the transitional DPT fit with the profession’s vision for the future?*

The American Physical Therapy Association (APTA) has created a “Vision 2020” document. APTA is unequivocally committed to a fully inclusive transition to the status of a doctoring profession. Inclusiveness means that every US-licensed physical therapist will be afforded the opportunity to attain degree parity with those who possess the clinical doctorate - DPT degree.

UK Context

The post-professional transitional DPT is designed as a track within the Division of Physical Therapy DPT Program. It uses a distributive educational model for practicing clinicians to pursue experiences which provide the didactic materials which were not a part of their previous Master of Science professional degree program.

Post-professional Transitional Doctor of Physical Therapy Track

Introduction and Justification

The purpose of this document is to propose the implementation of a post-professional, Doctor in Physical Therapy (DPT) track within the DPT degree at the University of Kentucky College of Health Sciences. The post-professional DPT, often referred to as the transitional DPT, would be available for currently licensed physical therapists that have already attained the equivalent of a masters level education. The transitional DPT offers this group of physical therapists the opportunity to develop and enhance knowledge and expertise in skills that have increasingly become expected as entry level in the current health care environment. The professional DPT degree program will be the entry-level degree for individuals training to be physical therapists, while the transitional DPT will be for individuals who *are* practicing physical therapists. The professional DPT has been approved by the UK Board of Trustees and is anticipated to be approved by the Council on Post Secondary Education in the fall of 2005. Pending final CPE approval, it will be implemented as the entry-level Physical Therapy degree in August/September of 2006.

The Division of Physical Therapy is one of four Divisions or Programs in the Department of Rehabilitation Sciences in the College of Health Sciences at the University of Kentucky. The foremost purpose and mission of the University of Kentucky Physical Therapy (UKPT) Program is to meet the physical therapy needs of Kentucky and society as a whole, by developing competent physical therapy practitioners who are analytical thinkers, educators and professionals. We strive to provide students enrolled in the program a quality education that requires accumulation of scientific knowledge accompanied by the acquisition of essential physical therapy skills and professional attitudes and behaviors. The UKPT program is currently the only physical therapy program offered at a public institution in Kentucky. The needs of the people of the Commonwealth of Kentucky have always been paramount to the structure of the program. The addition of the transitional DPT would give physical therapists in the Commonwealth (and beyond) access to the necessary education to progress to the clinical doctorate level. The only other PT program in the state is located at a private institution in Louisville. This program currently offers training for both the professional entry-level DPT degree and the transitional DPT degree.

The *Normative Model of Physical Therapist Professional Education, Version 2000*, and the Commission for Accreditation of Physical Therapy Education (CAPTE) have expanded the expected outcomes of physical therapy graduates in the areas of prevention, critical inquiry, clinical decision making, diagnosis, prognosis, management of care delivery and administration/business management. Furthermore, the December 1995 PEW Report made recommendations for all health professions to expand in the following areas: scientific base, public health management, clinical prevention, health education and health promotion, critical thinking, problem-solving skills, and communication and collaboration in the health care arena. These recommendations provide additional justification for the UKPT program to offer post-professional education for practicing physical therapists through a track such as the transitional DPT proposed in this document.

Program Foci

The profession of Physical Therapy is evolving within an ever-changing health care system. Those responsible for providing reimbursement for PT services are recognizing the benefits of patients having direct access to physical therapy. This is particularly true for people living in rural and/or medically underserved areas. Thus, the trend toward providing reimbursement for direct access to physical therapy is expected to grow. The expanded role of the physical therapy profession as an entry point into the health care system requires that physical therapists expand their knowledge in areas addressed in the transitional DPT, including differential diagnosis, pharmacology, management of complex patients, interpretation and utilization of the rapidly evolving scientific literature, gerontology, administration, and leadership. The transitional DPT will also prepare PT practitioners to more effectively address the public health and wellness issues of Kentuckians and society as a whole. Kentuckians face numerous challenges in health care, due in part to the prevalence of pathologies such as cancer, heart disease, lung disease, Alzheimer's disease, and arthritis, and conditions related to obesity, smoking, sedentary lifestyle, and the aging of the population. The transitional DPT will address health promotion and disease prevention issues across the life span.

Comprehensive Program Description

The professional entry-level DPT curriculum will require 120 semester hours of study, compared with the previous MSPT curriculum which requires 100 semester hours. The entry-

level professional DPT has expanded course content (11 new credits in didactic courses, 9 new credits in clinical education) related to practice environments (continuum of care, professional practice issues, leadership, health promotion and prevention), gerontology, advanced diagnostics (differential diagnosis), advanced manual interventions, management of the complex patient, pharmacology, cardiovascular and pulmonary disease, and clinical education. The post-professional transitional DPT will include foci in the above areas, with the exception of the additional clinical experience. The transitional DPT is designed to accommodate the practicing clinician, and the applicant must have a minimum of 9 months of full time clinical practice prior to entering the program. The professional DPT will require 29 credit hours of clinical education, while the masters degree professional program requires 20 credit hours. The additional 9 credit hours in the professional DPT are designed to provide the new graduate with an improved ability to “hit the ground running” upon completion of the professional program. It is not reasonable nor is it warranted to expect the clinician who has been practicing for a minimum of nine months to perform this additional internship in the transitional DPT track. The distributed learning format of the transitional DPT is specifically designed to allow practicing therapists to continue to practice while participating in the courses. Transitional DPT students will bring actual patient cases to required courses and receive input from faculty and student colleagues regarding current clinical practice.

As mentioned, a distributed learning format will be used in all courses in an effort to accommodate physical therapist practitioners from throughout Kentucky and other states. Such a format encompasses a wide range of learning strategies, including concentrated blocks of in-class time; web assisted learning activities utilizing the Blackboard course management software, and experiential and service learning type of activities. This includes regular contact time with faculty in on-line discussions, phone meetings, and in-class time. While part-time faculty are expected to participate within 2 or 3 of the courses, the majority of courses will be conducted by full-time faculty within the Division of Physical Therapy or affiliated with the Division on the UK campus.

To address the expanded professional DPT program content in the transitional DPT track, the track will be comprised of 14 semester hours that are to occur in the following sequence: 1) Integration of Evidence Based Practice (3 credits, summer semester) 2) Health Promotion and Disease Prevention (2 credits, Fall semester) 3) Advanced Physical Therapy Diagnosis and Screening (2 credits, Fall semester) 4) Advanced Clinical Decision Making I (3 credits, Spring

semester) 5) Advanced Clinical Decision Making II (2 credits, Spring semester) 6) Advanced Specialty Elective (2 credits, Intersession). This sequencing allows practitioners to complete the program as part-time students in one year.

The first course, *Integration of Evidence Based Practice*, provides an overview of the integration of evidence based practice concepts into current practice environments. This includes a case-based learning approach to address integration of evidence when available, as well as the use of critical thinking regarding practice approaches when evidence is varied or insufficient. It will be conducted through an initial on-campus classroom experience of 3-4 days, followed by web assisted instruction, independent projects, and on-line discussions among participants using Blackboard Course Management software. This course is foundational to later courses. It will include instruction by a part-time faculty member in collaboration with a full time UK Division of PT faculty member, Joan Darbee, PT, PhD.

Health Promotion and Disease Prevention is designed to increase the depth and breadth of the practitioner's knowledge regarding health promotion, wellness and disease prevention, particularly as is appropriate within the scope of PT practice. This course will be conducted through in-class instruction (1 day on campus in-class time is anticipated) and web assisted instruction, independent study and development of a mentored project. It will be coordinated by Rachel Gleason PT, MS and others within the UK Division of Physical Therapy.

Advanced PT Diagnosis and Screening is designed to provide the PT practitioner with increased expertise in analysis and interpretation of multidisciplinary tests, measures, and screens in order to enhance PT diagnostic and screening skills. Students will gain an increased understanding of characteristics such as reliability, validity, specificity, sensitivity, and predictive value in order to define the utility of tests and measures used in PT diagnosis. Instrumentation related to imaging techniques such as radiology, magnetic resonance, PET scans, and ultrasound will be addressed. This course will be taught through web assisted instruction, independent studies, and intensive on-campus lab instruction (3-4 days on campus in-class time anticipated). It will be coordinated by Art Nitz, PT, PhD and Terry Malone PT, EdD within the UK Division of Physical Therapy with possible participation of part-time faculty members .

Clinical Decision Making for the Complex Patient I and II are designed to enhance the diagnosis and management skills of PT practitioners in providing care to individuals with complex problems. This includes deepening practitioners' knowledge base regarding pathology and clinical application, as well as enhancing their understanding regarding biopsychosocial-

spiritual aspects of coping and adaptation as experienced by patients with multiple diagnoses and problems. Particular emphasis will be given to integrating evidence based approaches in patient examination, assessment and intervention planning. Each course will be taught through independent study, web assisted instruction, case study development and discussion through the use of the Blackboard Course Management software, and in-class presentation and collaboration (2 days of on campus in-class time are anticipated for each course). *Clinical Decision Making for the Complex Patient I* will include foundational material for both Clinical Decision Making courses, including advanced principles related to pharmacology, continuum of care, and administration issues. *Clinical Decision Making for the Complex Patient I* will have a specific learning focus on patients with neuromuscular pathology or chronic illness, while *Clinical Decision Making for the Complex Patient II* will focus on patients with musculoskeletal pathology or acute illness. Both courses will address complex patients across the life span and will integrate advanced concepts related to interdisciplinary practice, diagnostics, pharmacology, cardiopulmonary, psychosocial, ethical, legal, reimbursement issues, and evidence based practice. Both courses are in the spring semester, and will be taught in a modular format, sequentially. These courses will be directed by Joan Darbee, PT, PhD, and she will coordinate the participation of multiple full time UK Division of PT faculty based on the areas of expertise addressed in the course.

The *Advanced Elective* course is designed to provide practicing therapists (i.e., the learners in the track) with an avenue for increasing depth in an area appropriate for their practice environment and will include courses related to advanced manual therapy interventions, leadership and administration, advanced neurorehabilitation interventions, advanced orthopedic interventions, advanced anatomy and physiology, and clinical research. The elective courses will be taught through web assisted instruction, structured mentorship, and intensive lab based practice experiences (3-4 days of on campus in-class time anticipated). Each student will be required to take one elective course. Some elective courses may occur across several semesters (e.g. clinical research) and the student may chose to register for the elective in a semester other than intersession. This course will be include instruction by both part-time and full time Division of PT faculty in an effort to offer a variety of offerings to meet the individual needs of the learners.

As noted, all classes will be taught in a distributed learning format through combinations of on-campus experiences (either classroom or lab), web assisted instruction and interaction

through the use of Blackboard Course Management software, completion of independent studies, and/or structured mentorship. Orientation to the distributed learning format will occur in three ways: 1) written materials with explicit instructions on the type of technology needed and the approach used to access the Blackboard Course Management Software and the UK library databases. 2) in-class orientation to the technology during the in-class time of the first course, and provided by the instructional technology support staff in the College of Health Sciences and in the Teaching and Academic Support Center (TASC), 3) syllabi for each course outlining the format, organization, and expectations for the course.

Each course is structured to occur with faculty interaction and availability throughout the semester via web assisted instruction, discussions and presentations using Blackboard Course Management software, and telephone meetings. The program will admit students into a cohort expected to complete the program in a time frame of 12 months (4 semesters). It is anticipated that each student will be on campus for 3-4 days in the summer semester, 4-5 days in the fall semester, 3-4 days in the spring semester, and 2-4 days in the Intersession. This expectation will be made clear to applicants and the courses will be offered only 1 time per year. If a student must withdraw or choose not to register for a class in a particular semester, the only option is to begin again the next year at the point in the sequence in which he or she left.

While the content of these courses is equivalent to the content added to progress the professional MSPT program to the professional DPT program, the transitional DPT courses are not identical to the new courses of the professional DPT. It was not possible to duplicate courses because the professional DPT curriculum is 120 credit hours and the content is integrated in a different sequence and manner for the entry level learner. This is evident in the table which provides a list of the courses in the professional DPT with correlating content in the transitional DPT.

Significant activities have occurred within the Division of Physical Therapy related to not only to planning of these courses but also their implementation. The impact on faculty resources and instructional loads has been carefully considered by College administration and Divisional faculty. Significant improvements in this proposal occurred through the input of College committees and officers. We believe that the program can be successfully implemented as outlined.

Proposed Post-Professional Transitional DPT Track

NEW COURSES	CREDITS	SEMESTER/FORMAT
Integration of Evidence Based Practice PT 902	3	Summer 3-4 days on campus class time anticipated (includes orientation to the program) Web assisted instruction throughout semester EBP case based paper and presentation Blackboard on-line discussion
Health Promotion and Disease Prevention PT 904	2	Fall 1 day on campus class time anticipated Web assisted instruction throughout semester Health promotion project developed, implemented, assessed. Blackboard discussion and presentations
Advanced PT Diagnosis and Screening PT 906	2	Fall 3-4 days on campus class time anticipated Web assisted instruction throughout semester Intensive on campus lab instruction Blackboard discussion and presentations
Clinical Decision Making for the Complex Patient I PT 908	3	Spring 1-2 days on campus class time anticipated Web assisted instruction throughout semester Case based development On-line tutorials, Blackboard discussion format

Transitional DPT/Professional DPT Correlates

Transitional DPT Courses	Credits	Professional DPT Correlates
<i>Integration of Evidence Based Practice</i> PT 902	3	Content woven into PT 645 (Research and Measurement, 3 credit course {not new} moved into first semester as foundational course), PT 628 (Gerontology, 1 additional credit), PT 860 Dx and Management of the Complex Pt (new, 2 credits). This material also has increased emphasis throughout the DPT curriculum in key courses such as PT 650, 651, 652, 847, 645, 668, 669.
<i>Health Promotion and Disease Prevention</i> PT 904	2	PT 834 (intro to PT, 1 additional credit), PT 628 (Gerontology, one additional credit), This material has increased emphasis in PT 770, (Public Health and Wellness Issues; this course has changed emphasis in the new DPT curriculum, although it has not changed course credits), and PT 854 (Pathology and Clinical Implications, one additional credit)
<i>Advanced PT Diagnosis and Screening</i> PT 906	2	PT 830 (Diagnostic Imaging, Screening, and Instrumentation, 2 new credits), PT 854 (Pathology and Clinical Application, one additional credit)
<i>Clinical Decision Making for the Complex Patient I</i> PT 908	3	PT 860 (Diagnosis and Management of the Complex Patient, 2 credits), PT 604 (Pharmacology one additional credit), PT 877 (Cardiopulmonary 1 additional credit), PT 628 (Gerontology, one additional credit)
<i>Advanced Clinical Decision Making for the Complex Patient II</i> PT 910	2	PT 860 (Diagnosis and Management of the Complex Patient, 2 credits), PT 827 (Management of Neurological Systems II one additional credit), PT 854 (Pathology and Clinical Application, one additional credit)
<i>Advanced Elective</i> PT 912	2	PT 850 Advanced Manual Interventions (new 3 credit course), PT 654 Motor Control Theory and Intervention (one additional credit), PT 686 (Electives, not new)

Admissions

The transitional DPT track is intended to provide an avenue for practicing physical therapists to grow professionally while remaining engaged in clinical practice. The program is anticipated to serve the community for up to 7 years. By this time it is anticipated that the demand for the transitional DPT track will no longer be present as students from the regional area will have completed a transitional DPT track while new graduates will have completed the entry-level/ professional DPT program. Admissions criteria require that the applicant be a licensed Physical Therapist with the equivalent of a minimum of 9 months of full time practice.

Enrollment will be a minimum of 15 students per cohort (per year) with a target of 24. We anticipate that the demand will be high in the first several years; thus priority will be given to applicants who are graduates of the UK PT education program with a Master of Science Degree in PT. This allows the Division of Physical Therapy to better meet the needs of the Commonwealth and UK's alumni. In addition to UK graduates, eligible applicants may be MSPT or MPT graduates from another university.

Other Physical Therapists may apply after completion and submission of the Physical Therapist Evaluation Tool (PTET). The completed instrument will be reviewed by the UKPT Admissions Committee to determine the appropriateness of the PT applicant for admission. This instrument, available to the applicant through the APTA, was developed by a Task Force of the American Physical Therapy Association (APTA), in collaboration with PT Program Directors, to provide a valid instrument for admissions screening of PT's for transitional DPT programs. This instrument includes a "Professional Portfolio" as well as a scored "Tasks Performed" module. The portfolio component provides the applicant with a mechanism for explaining and elaborating on their past and current experiences and capabilities. A comprehensive list of items that characterize the applicant's capabilities and experiences is provided for the applicant as examples for potential inclusion. The Task Performance Component is a list of 148 tasks (equivalent to a list of learning objectives used by the accrediting agency for PT programs) in which the applicant describes the frequency with which the task is and has been performed, and a norm referenced score is generated.

Priority will be given to applicants who demonstrate commitment to professional growth, PT education and service to PT education programs. The program reserves the right to save or

add positions in the cohort (not to exceed the maximum of 30) for applicants with these characteristics.

All applicants will need to complete the application packet which will include the following:

- Application sheet
- Curriculum vita including hours worked and type of practice setting
- Demonstration of scholarly and/or community service activity
- Statement of practice philosophy
- Transcripts from previous University work (former UK students will not need to include this)

Applications will be able to be accessed through the UKPT web site. When final approval of this program is secured, an email will be sent to all former students to inform them of the opportunity to apply.

Transitional Doctor of Physical Therapy

Budgetary Implications

The creation and implementation of the transitional DPT track has numerous implications for the faculty members of the Division of Physical Therapy. Since the initiation of the entry-level or professional DPT Program will be occurring simultaneously, the impact on faculty workloads must be considered. Dean Gonzalez has agreed to provide the Division access to the tuition differential as well as the distance learning funds that will result from the enrollment of these students. The expected minimal class size is 15 and students will be expected to complete the transitional curriculum within a calendar year. The following data reflect anticipated income and expenditures using Fall, 2005 schedule information.

Graduate Tuition – part-time \$298.55/cr.hr. Professional Doctorate \$391.55/ cr.hr.
Differential of \$93/ cr.hr.

Distance Education

Return to College of tuition – approximately \$100/ cr.hr.

Thus for each semester credit hour of registration per student – there should be approximately \$193 provided to the Division to provide the transitional DPT track.

Based on a minimum of 15 students in a cohort – 14 hours required

$15 \times 14 = 210$ $210 \times \$193 = \$40,530$

(anticipated annual revenues returned to the Division associated with the transitional DPT)

These dollars will allow the hiring of part-time staff to provide support and part-time faculty to instruction in the transitional DPT track or to reduce existing faculty workload within the professional DPT in order to allow their participation in the transitional DPT.

Public “Benchmarks” of Transitional DPT

The professional DPT is being developed or initiated in many of the public institutions which currently offer MSPT programs. Many of UK’s benchmarks do not have PT programs, and those that do have not yet started a transitional DPT track, although most are developing or have initiated a professional DPT as the entry level degree. We expect to see the number of transitional DPT tracks grow in the UK benchmarks that have professional DPT programs.

The public institutions surveyed here represent public “benchmarks” of the DPT. Most programs have a substantial (if not entire) component of web-based distance instruction in the transitional tracks, making the programs accessible to practicing clinicians. While number of semester hours required varies based on the institution, most publics reviewed required 12-18 credits of course work. Those requiring over 20 semester hours provided substantial flexibility for waiving or transferring semester hour credits for PT’s with appropriate graduate level training and/or portfolio competencies. Examples of credit hours required for completion of transitional DPT programs at benchmark and other public institutions are provided below:

University of Maryland: 15 credits

University Sciences in Philadelphia: 12 credits; program is for USP graduates only

Idaho State: 18 credits, admissions open to PT’s with Masters Degrees

Massachusetts General: 15 credits maximum, 8 credits minimum; admissions open to PT’s with BS or MS

Virginia Commonwealth University: 15 for PT’s with MS; 19 for PT’s with BS

University of Minnesota: 30 credits, will accept PT’s with BS; will waive up to 15 credits for previous graduate level work

Saint Louis University: 18 credits

University of Tennessee: 25 credits; 13 can be waived with appropriate graduate course work

Transitional Doctor of Physical Therapy- Proposed Amendment

Jeff Dembo:

In view of the heavy dependence of this program on computer-based online material, the Council expressed concerns about the program faculty members' ability to create this material in a relatively short timeframe. In view of an upcoming discussion that will be held with the program faculty in January regarding resources available to the program, once these resources (or lack thereof) have been identified the Council requests that the program faculty seriously consider whether it is best to initiate the program this year or to wait an additional year.

APPLICATION FOR NEW COURSE

1 Submitted by College of Health Sciences Date October 2005

Department/Division offering course Dept. of Rehabilitation Sciences, Division of Physical Therapy

2. Proposed designation and Bulletin description of this course

a. Prefix and Number PT 902 b. Title* Integration of Evidence Based Practice

*NOTE: If the title is longer than 24 characters (including spaces), write
A sensible title (not exceeding 24 characters) for use on transcripts Integration of EBP

c. Lecture/Discussion hours per week 3 d. Laboratory hours per week _____

e. Studio hours per week _____ f. Credits 3

g. Course description

This course is designed to provide the participant with knowledge and hands-on experience in the integration of an evidence-based approach into practice. Students will learn how to critically review the literature and will acquire skills to integrate evidence into practice.

h. Prerequisites (if any)

Admission to transitional DPT track and completion of a CAPTE accredited professional – entry level physical therapy program and successful achievement of licensure. Applicants will be required to have completed a minimum of 9 months of clinical activity as a professional physical therapist.

i. May be repeated to a maximum of _____ (if applicable)

4. To be cross-listed as

N/A
Prefix and Number Signature, Chairman, cross-listing department

5. Effective Date Summer 2006 (semester and year)

6. Course to be offered Fall Spring Summer

7. Will the course be offered each year? Yes No
(Explain if not annually)

8. Why is this course needed?

This course is needed to complete requirements for the professional degree of Doctor of Physical Therapy in the Transitional DPT track.

9. a. By whom will the course be taught? Invited faculty and related UK faculty

b. Are facilities for teaching the course now available? Yes No
If not, what plans have been made for providing them?

10. What enrollment may be reasonably anticipated? 30

11. Will this course serve students in the Department primarily? Yes No
Will it be of service to a significant number of students outside the Department? Yes No
If so, explain.

Will the course serve as a University Studies Program course? Yes No

If yes, under what Area? _____

12. Check the category most applicable to this course

- traditional; offered in corresponding departments elsewhere;
- relatively new, now being widely established
- not yet to be found in many (or any) other universities

13. Is this course applicable to the requirements for at least one degree or certificate at the University of Kentucky? Yes No

14. Is this course part of a proposed new program: Yes No
If yes, which?

15. Will adding this course change the degree requirements in one or more programs? Yes No
If yes, explain the change(s) below

16. Attach a list of the major teaching objectives of the proposed course and outline and/or reference list to be used.

17. If the course is a 100-200 level course, please submit evidence (e.g., correspondence) that the Community College System has been consulted. Check here if 100-200.

18. If the course is 400G or 500 level, include syllabi or course statement showing differentiation for undergraduate and graduate students in assignments, grading criteria, and grading scales. Check here if 400G-500.

19. Within the Department, who should be contacted for further information about the proposed course?

Name Terry Malone Phone Extension 80600

*NOTE: Approval of this course will constitute approval of the program change unless other program modifications are proposed.

ACTION OTHER THAN APPROVAL

PT 902 Integration of Evidence Based Practice
Division of Physical Therapy
University of Kentucky

Course Description:

This course is designed to provide the participant with knowledge and hands-on experience in the integration of an evidenced-based approach into practice. Students will learn how to critically review the literature and will acquire skills to integrate evidence into practice. As the first course in the transitional curriculum, PT 902 will also serve as an introduction to the transitional program and will provide a format for acquisition of skills necessary to effectively complete the requirements. This course is foundational to courses that follow it.

Course Objectives:

Through in-class and web assisted instruction, independent study and mentored project development, the student will:

1. understand the concepts of evidence-based medicine, as well as the methods and issues in applying evidence to individual patients.
2. select and analyze outcome tools.
3. analyze the commonly used manual examination tests and clinical assessment systems for reliability, validity, sensitivity and specificity.
4. critically review a minimum of five articles and then synthesize these data into the format of "Meta-analysis" of the literature pertinent to a specific patient pathology.
5. integrate evidence into clinical practice of individual patients through presented materials such as clinical treatment protocols, and case based assessment and intervention planning.
6. understand the philosophy of the post-professional DPT, distributed learning as an instructional format and expectations for program completion.

Instructional Strategies:

This class will be taught using a distributed learning format with a wide range of learning strategies including in-class time as well as electronic communication and independent study. Students will be given reading and written assignments to complete for class discussion and to submit for the instructor to review.

Reading Assignments:

Required text:

Users' Guides to the Medical Literature: Essentials of Evidence-based Clinical Practice. Guyatt G and Rennie D; 2002.

Written Assignments:

1. Read the article by MacDermid (3B.) pick a research article that is a clinical trial comparing 2 treatment interventions or a treatment to a placebo or control group. Students grade the article as described by MacDermid.
2. Prepare a manuscript for submission that addresses the justification and procedures (introduction and methods) section of a research project in which a clinical test would be evaluated or an exercise intervention would be evaluated.
3. Review a systematic review article and provide an overview commentary.
Five articles for the Evidence-based Practice section must conform to the following format. The purpose of this special section is to provide a short review of current scientific literature and to apply the findings to clinical practice. All articles submitted for this section should be concise reviews of published systematic reviews or meta-analyses on relevant topics. Reviews of individual, large, controlled clinical trials will also be considered. The review must begin with the complete article title and reference and a statement of the clinical question the review addresses. The rest of the review consists of a summary of the article and must include the following sections: data sources and search terms used, study selection (inclusion and exclusion) criteria, the methods used to extract and review data including a list of the primary outcome measures, results of the search strategy and primary outcome measures and conclusions. Students may use supplementary scientific literature (up to a maximum of 5 references) to support the commentary.
4. Or other approved assignment per instructor

Outcome measures

1. A final examination on the materials covered via Blackboard
2. Written Assignments, including article reviews, and evaluation/intervention EBP review.

Grading:

100-92	A
91 - 83	B
82 – 76	C

ACTION OTHER THAN APPROVAL

PT 904 Health Promotion and Disease Prevention
Division of Physical Therapy
University of Kentucky

Course Description:

This course is designed to increase the depth and breadth of the practitioner's knowledge regarding health promotion, wellness and disease prevention, particularly as is appropriate within the scope of physical therapy practice. Using valid theoretical constructs for behavioral change and support from scientific literature, the course will focus on clinical application and program design for effective promotion of health, wellness, and disease prevention for the individual and for the community.

Course Objectives:

Through in-class and web assisted instruction, independent study and mentored project development, the PT practitioner will:

1. analyze practical applications based on valid theoretical constructs in the area of health promotion.
2. describe approaches to measuring outcomes effectiveness in this area.
3. create and implement a health promotion program within the clinical environment or community in which you practice that is appropriate and accessible.
4. analyze the impact of this program via a self devised assessment instrument which appropriately details expected outcomes.

Instructional Strategies:

This class will be taught using a distributed learning format with a wide range of learning strategies including in-class time as well as Blackboard and other electronic communication and independent study. Students will be assigned a mentored class project that will be designed and carried out in their chosen area of interest.

Reading Assignments:

Prevention Practice: A Physical Therapist's Guide for Health, Fitness and Wellness by Catherine Thompson, MS, PT . Slack Publishing

Written Assignments:

1. Potential topics for on-campus and on-line components:
 - a. Behavior change theory
 - b. Screening tools for determining risk factors

- c. Healthy People 2000, 2010
- d. Exercise prescription for wellness across the lifespan (therapeutic dosage)
- e. Motivation
- f. Reimbursement for prevention (Helene Fearon)
- g. H.I.T. Center, Lexington, Huntington as resources for athletes
- h. CAM strategies
- i. Obesity/body composition
- j. Nutrition
- k. Osteoporosis
- l. Access to health care (socioeconomic, educational, income aspects)
- m. Evaluation of outcomes of wellness intervention

2. Principles related to cultural competence will be woven throughout the process

Outcome measures:

- 1. Development and outcome assessment of health promotion project (paper format)
- 2. Blackboard discussion graded

Grading:

100-92	A
91 - 83	B
82 – 76	C

ACTION OTHER THAN APPROVAL

PT 906 Advanced Physical Therapy Diagnosis and Screening
Division of Physical Therapy
University of Kentucky

Course Description:

This course is designed to provide the physical therapist practitioner with increased expertise in analysis and interpretation of multidisciplinary tests, measures, and screens in order to enhance physical therapy diagnostic and screening skills. Instrumentation will include those related to imaging techniques such as plain film radiology, magnetic resonance, PET scans and diagnostic ultrasonography. In addition, specific foci will include nerve conduction velocity examination, as well as the use of computer enhanced equipment (e.g. Biodex, Cybex, BTE, Neurocom, and kinesiology EMG) for assessing strength, endurance, balance, and function.

Course Objectives:

Through on-line instruction, independent studies, and intensive lab instruction, the student will:

1. analyze and critique the scientific basis of and the indications for a variety of instrumentation techniques used in diagnostic screening of patients typically referred for rehabilitation.
2. collaborate with other health care providers as needed to use the results of such diagnostic tests in maximizing the patient's functional outcome in rehabilitation.
3. demonstrate clinical determinations regarding a three-tiered disposition model:
 - Patient can be treated effectively and independently by a physical therapist
 - Patient can benefit from physical therapy services, but additional specialist evaluation, input and diagnostic tests are necessary
 - Patient will not benefit from physical therapy services and must be referred elsewhere for definitive disposition
4. synthesize available evidence based data and place into context a clinical decision related to specific patient pathology through submissions.
5. demonstrate the ability to make differential diagnoses by refining understanding of diagnostic criteria.

Instructional Strategies:

This class will be taught using a distributed learning format with a wide range of learning strategies including in-class time as well as electronic communication and independent study. Students will be assigned preparatory work on-line before coming to campus followed by two to four full days on campus for lecture and laboratory experiences with the equipment noted above. This session will be followed by independent work including literature searches, annotated bibliographies, and response to questions developed for this course in the form of a paper – addressing evidence-based issues, diagnostic criteria, and outcomes of intervention.

Reading Assignments:

Boissonnault, Editor: Examination in Physical Therapy Practice-Screening for Medical Disease 2nd Ed. Churchill Livingstone, 1995.

Goodman C, Boissonnault W: Pathology-Implications for the Physical Therapist. 2nd Ed. WB Saunders Co. 2003

Other materials will be assembled by individual faculty presenters and the course coordinator.

Outcome measurement:

1. 50 item pre-test exam to determine level of proficiency in areas outlined for this course.
2. Reading assignments and on-line Blackboard discussion
3. Written assignments demonstrating clinical determinations based on case based scenarios
4. Laboratory participation
5. 100 item post-test (on Blackboard) determine acuity of achievement of course goals.

Grading:

100-92	A
91 - 83	B
82 - 76	C

PT 908 Clinical Decision Making for Patients with Complex Problems I
Division of Physical Therapy
University of Kentucky

Course Description:

This course is designed to enhance the diagnosis and management skills of PT practitioners in providing care to individuals with complex problems related to chronic illness and/or neuromuscular pathology. This includes deepening practitioners' knowledge base regarding pathology and clinical application, as well as enhancing their understanding regarding biopsychosocial-spiritual aspects of coping and adaptation as experienced by patients experiencing chronic illness and/or neuromuscular pathology. The course will address patients across the life span with these pathologies.

The foundational philosophy of this course design is to include an integration of dynamic systems that will include: lifespan considerations, advanced diagnostics, pharmacology, integumentary, musculoskeletal, cardiopulmonary, neuromuscular, psychosocial, ethical, legal, reimbursement issues, quality of life, continuum of care environments, and evidence based practice.

PT 908 and 910 are linked/sequenced courses. The initial portion of PT 908 provides the format and process for both courses. Foundational material in the areas of pharmacology, reimbursement, care environments, and cardiopulmonary represents one credit of course-work in PT 908, and this foundational material will be utilized throughout PT 908 and PT 910.

Course Objectives:

Through independent study, on-line case study development related to chronic patient conditions and discussion, and in-class presentation and collaboration, students will:

1. develop appropriate PT diagnoses for patients with complex problems through selection of appropriate tests and measures and an integrated evaluative schema
2. appropriately select diagnostic and screening techniques for such patients to determine appropriate referral and collaboration
3. delineate the clinical implications of pharmacological management for such patients
4. discuss issues related to reimbursement (and other constraints to access) within the context of the ever-changing health care system
5. synthesize the above information to describe possible approaches to patients who present with difficult ethical dilemmas
6. develop and present appropriate management strategies that are based on the best evidence available, the practitioner's skill set and scope of practice, and the patient's explicit and implicit needs.
7. create and present a poster presentation of the selected patient case study

Instructional strategies:

This class will be taught using a distributed learning format with a wide range of learning strategies including in-class time as well as electronic communication and independent study. This course will be taught in a Problem Based Learning format. It will be case based with students having the option of working on the cases in pairs. Blackboard will be utilized as well as on campus time for lectures and presentations. Students will work with three case studies which are very deliberate in inclusion of the core material listed in the course description. The case studies will also serve as role models for an assignment in which the students develop a case study of their own.

The course will be taught with one-two days of in-class time, and on-line tutorials for some of the core elements (e.g. pharmacology, reimbursement updates). On-line exams will occur to be assure student acquisition of on-line material. Case studies will also occur on Blackboard, with discussion among faculty and students. Students will return to campus for presentations and poster exhibits.

Case Study Assignments-Preliminary models:

1. Progressive neuromuscular disorder.
 - a. Pediatrics to late 30s
 - b. Covers all areas

2. Adult to old-old disorder (e.g. Parkinson Disease)
 - a. Movement type disorder
 - b. Cardiovascular problems
 - c. Covers all areas

3. Traumatic injury (e.g. SCI, TBI)
 - a. Acute to chronic
 - b. Over the life span
 - c. Covers all areas

Outcome measures:

1. Blackboard written quizzes/exams
2. 3 Written case studies
3. Presentations
4. Submission of self-developed case study for poster presentation

Grading:

100-92	A
91 - 83	B
82 – 76	C

g. Course description

This course is designed to enhance the diagnosis and management skills of PT practitioners in providing care to individuals with complex problems related to acute illness and/or musculoskeletal pathology. This includes deepening practitioners' knowledge base regarding pathology and clinical application, as well as enhancing their understanding regarding biopsychosocial-spiritual aspects of coping and adaptation as experienced by patients with multiple diagnoses and problems. Material foundational to this course is presented in PT 908. The two courses are linked, taught in modular format sequentially.

h. Prerequisites (if any)

Admission to transitional DPT track and completion of a CAPTE accredited professional – entry level physical therapy program and successful achievement of licensure. Applicants will be required to have completed a minimum of 9 months of clinical activity as a professional physical therapist and the prerequisites PT 902 and 908.

i. May be repeated to a maximum of _____ (if applicable)

4. To be cross-listed as

N/A
Prefix and Number Signature, Chairman, cross-listing department

5. Effective Date Fall 2006 (semester and year)

6. Course to be offered Fall Spring Summer

7. Will the course be offered each year? Yes No
(Explain if not annually)

8. Why is this course needed?

This course is needed to complete requirements for the professional degree of Doctor of Physical Therapy in the Transitional DPT track.

-
9. a. By whom will the course be taught? PT Division faculty
- b. Are facilities for teaching the course now available? Yes No
If not, what plans have been made for providing them?
-

10. What enrollment may be reasonably anticipated? 30

11. Will this course serve students in the Department primarily? Yes No
- Will it be of service to a significant number of students outside the Department? Yes No
If so, explain.
-

Will the course serve as a University Studies Program course? Yes No

If yes, under what Area? _____

12. Check the category most applicable to this course
- traditional; offered in corresponding departments elsewhere;
- relatively new, now being widely established
- not yet to be found in many (or any) other universities

13. Is this course applicable to the requirements for at least one degree or certificate at the University of Kentucky? Yes No

14. Is this course part of a proposed new program: Yes No
If yes, which?

15. Will adding this course change the degree requirements in one or more programs? Yes No
If yes, explain the change(s) below

16. Attach a list of the major teaching objectives of the proposed course and outline and/or reference list to be used.

17. If the course is a 100-200 level course, please submit evidence (e.g., correspondence) that the Community College System has been consulted. Check here if 100-200.

18. If the course is 400G or 500 level, include syllabi or course statement showing differentiation for undergraduate and graduate students in assignments, grading criteria, and grading scales. Check here if 400G-500.

*NOTE: Approval of this course will constitute approval of the program change unless other program modifications are proposed.

PT 910 Clinical Decision Making for Patients with Complex Problems II

Division of Physical Therapy

University of Kentucky

Course Description:

This course is designed to enhance the diagnosis and management skills of PT practitioners in providing care to individuals with complex problems related to acute illness and/or musculoskeletal pathology. This includes deepening practitioners' knowledge base regarding pathology and clinical application, as well as enhancing their understanding regarding biopsychosocial-spiritual aspects of coping and adaptation as experienced by patients with multiple diagnoses and problems related to acute and/or musculoskeletal pathology. The course focus will include patients across the life span.

The foundational philosophy of this course design is to include an integration of dynamic systems that will include: lifespan considerations, advanced diagnostics, pharmacology, integumentary, musculoskeletal, cardiopulmonary, neuromuscular, psychosocial, ethical, legal, reimbursement issues, quality of life, continuum of care, and evidence based practice.

Course Objectives:

Through independent study, on-line case study development related to acute/musculoskeletal patient conditions and discussion, and in-class presentation and collaboration, students will:

1. develop appropriate PT diagnoses for patients with complex problems through selection of appropriate tests and measures and an integrated evaluative schema
2. appropriately select diagnostic and screening techniques for such patients to determine appropriate referral and collaboration
3. delineate the clinical implications of pharmacological management for such patients
4. discuss issues related to reimbursement (and other constraints to access) within the context of the ever-changing health care system
5. synthesize the above information to describe possible approaches to patients who present with difficult ethical dilemmas.
6. develop appropriate management strategies that are based on the best evidence available, the practitioner's skill set and scope of practice, and the patient's explicit and implicit needs.
7. create and present a poster presentation of the selected patient case study

Instructional Strategies:

This class will be taught using a distributed learning format with a wide range of learning strategies including in-class time as well as electronic communication and independent study. This course will be taught in a Problem Based Learning format. It will be case based with students having the option of working on the cases in pairs. Blackboard will be utilized as well as some on campus time for lectures and presentations. Students will work with three case studies which are very deliberate in inclusion of the core material listed in the course description. The

case studies will also serve as role models for an assignment in which the students develop a case study of their own.

The course will be taught with one to two days of in-class time. Exams will occur to be sure on-line material is actually learned on a deeper level. Case studies will be on line, utilizing BlackBoard for discussion, with core faculty having less presence on line as students increase their responsibility. Students will return to campus for presentations and poster exhibits.

Case Study Assignments:

Preliminary models for case studies:

4. Progressive neuromuscular disorder.
 - a. Pediatrics to late 30s
 - b. Covers all areas

5. Adult to old-old disorder (e.g. Parkinson Disease)
 - a. Movement type disorder
 - b. Cardiovascular problems
 - c. Covers all areas

6. Traumatic injury (e.g. SCI, TBI)
 - a. Acute to chronic
 - b. Over the life span
 - c. Covers all areas

Outcome measures:

1. Blackboard written quizzes/exam
2. Written case studies
3. Presentations
4. Submission of self-developed case study for poster presentation

Grading:

100-92	A
91 - 83	B
82 - 76	C

APPLICATION FOR NEW COURSE

1. Submitted by College of Health Sciences Date October 2005
Department/Division offering course Dept. of Rehabilitation Sciences, Division of Physical Therapy

2. Proposed designation and Bulletin description of this course

a. Prefix and Number PT 912 b. Title* Advanced Electives

*NOTE: If the title is longer than 24 characters (including spaces), write
A sensible title (not exceeding 24 characters) for use on transcripts _____

c. Lecture/Discussion hours per week 2 d. Laboratory hours per week _____

e. Studio hours per week _____ f. Credits 2

g. Course description

This course is designed to allow the student to select an area of special interest for focus and investigation. The course work is designed to allow acquisition of knowledge and skill at an advanced level. Students will choose one specialty area out of a selection of elective topics for their in-depth study. Topics for advanced electives may vary each year based on student interest and faculty expertise.

h. Prerequisites (if any)

Admission to transitional DPT track and completion of a CAPTE accredited professional – entry level physical therapy program and successful achievement of licensure. Applicants will be required to have completed a minimum of 9 months of clinical activity as a professional physical therapist and the prerequisite PT 902.

i. May be repeated to a maximum of _____ (if applicable)

4. To be cross-listed as

N/A

ACTION OTHER THAN APPROVAL

PT 912 Advanced Electives
Division of Physical Therapy
University of Kentucky

Course Description:

This course is designed to allow the student to select an area of special interest for focus and investigation. The course work is designed to allow acquisition of knowledge and skill at an advanced level. Students will choose one specialty area out of a selection of elective topics for their in-depth study. Topics for advanced electives may vary each year based on student interest and faculty expertise.

Course Objectives:

Following participation in lecture, lab, clinical observation and a variety of demonstrations students will:

1. integrate the concepts of evidence-based medicine, as they relate to the selected elective topic through discussions and class activities.
2. select and analyze outcome tools as appropriate for the selected specialty topic.
3. critically review and present the evidence for efficacy related to the specialty area as seen in existing the literature.
4. demonstrate the ability to integrate existing evidence into clinical practice in the treatment of patients related to this specialty.
5. appropriately select and then demonstrate advanced intervention skills as used in the treatment of patients related to this specialty area.

Instructional Strategies:

This class will be taught using a distributed learning format with a wide range of learning strategies depending on the nature of the elective. Strategies will include in-class time as well as electronic communication and independent study. Electives will be taught using a variety of didactic, laboratory demonstration, clinical and independent study formats. Students will be given reading, written and practical assignments to complete for class discussion and to present for the instructor to review.

Electives may be offered on a rotating schedule and will include but not be limited to:

- Lymphedema Management and Soft Tissue Mobilization.
- Spinal Mobilization and Manipulation
- Handling Techniques for the Patient with Neurological Impairment
- Leadership, Administration, Management
- Advanced Regional Gross Anatomy Dissection
- Independent Study
- Mentored Clinical Research Project

Reading Assignments:

Reading assignments will be determined by the individual faculty guiding the elective and will be announced via the syllabus at the start of the course.

Written Assignments:

Building on the concepts introduced in PT 902, students will:

-Review the article by MacDermid used in PT 902. Pick a research article related to the Advanced Elective topic. Students grade the article as described by MacDermid.

-Review a systematic review article pertinent to the elective and provide an overview commentary.

Articles must conform to the following format. The purpose of this special section is to provide a short review of current scientific literature and to apply the findings to the advanced elective selected. All articles submitted for this section should be concise reviews of published systematic reviews or meta-analyses on relevant topics. Reviews of individual, large, controlled clinical trials will also be considered. The review must begin with the complete article title and reference and a statement of the clinical question the review addresses. The rest of the review consists of a summary of the article and must include the following sections: data sources and search terms used, study selection (inclusion and exclusion) criteria, the methods used to extract and review data including a list of the primary outcome measures, results of the search strategy and primary outcome measures and conclusions. Students may use supplementary scientific literature (up to a maximum of 5 references) to support the commentary.

-Make a presentation on their topic to an audience to be determined but could include: post-professional track DPT class members, faculty, professional DPT students, community based clinicians, community support groups, invited guests, other College of Health Sciences faculty.

Outcome Measurements:

1. Reading assignments
2. Written assignment-article review
3. Practical examination as appropriate
4. Presentation(s)

Grading:

100-92	A
91 - 83	B
82 - 76	C
