<b>Regulatory/Statutory</b>	No	<b>UK Strategic Indicator(s) University-Wide Needs</b>	Yes	<b>Accreditation Requirements Other</b>	No No
-----------------------------	----	--	-----	---	----------

**Requirements/Issues** This project relates to strategic indicators #21, and the need for web-based student account access and other student services.

**Reference #s** Strategic Indicator #21.

**Description** This PRF is a replacement for the EPOS BR/student account access/payment project. The EPOS BR implementation was disrupted due to the contract cancellation for failure to deliver the web registration product. The current SCT maintenance contract allows for delivery of BR student account access (charges and payments) via WWTE. We are requesting the implementation of BR services within WWTE, and the inclusion of credit card payments either through a future release of WWTE, or by UK modification if required. (Students are currently allowed to pay their fees with a credit card on VIP - Voice System.) Web services provided with the WWTE product will allow UK to move ahead technically, and are related to student recruitment, retention and satisfaction.

**Key Issues**

**Costs** IDMS applications programming and DBA time.

**AvailableFunding** IT personnel budget.

**Funding Requirements** None other than above.

**Benefits** Benefits relate to strategic indicator #21, increase student satisfaction in target areas. Students have expressed interest in Web access to their data over the last several years.

**Deadline** Spring 2002.

**Risk** UK will lag further behind in providing web services for students. This has a negative impact in recruitment, retention and satisfaction. Specs for the BR student account access/payment were completely written for the EPOS product, which gave staff knowledge of how the web product should work for our student population.

**Policy/Procedure**

**Suggested Priority** 1
