

MILTON KORNET, Ph.D.

Associate Professor
Pharmaceutical Sciences

Research Interests

Dr Kornet's research interests and publications are in the areas of medicinal chemistry, heterocyclic chemistry, anticonvulsants, local anesthetics, antiarrhythmics, hydrazine-derived drugs and anticancer agents. His research is mentioned in several organic chemistry compendia including: several volumes of "Reagents for Organic Synthesis", and "Methodicum Chemicum." He is the author of 59 scientific publications. His honors include: Sigma Xi, Rho Chi, American Men of Science, Phi Delta Chi and Who's Who in Technology Today.

Research Publications/Presentations

Kornet, M.J., Thio, P.A. and Tolbert, L.M., "Serendipitous Two-Step Synthesis of a Naphth[3,2,1-cd]Indole," J. Org. Chem., 45, 30-32 (1980).

Kornet, M.J., "Synthesis and Anticonvulsant Activity of 3-Alkyl-3,4-dihydro-2(1H)-quinazolinones," J. Heterocycl. Chem., 29, 103-105 (1992).

Kornet, M.J., Ali, K.A.-N., and Steinberg, M.L., "Synthesis of p-Aminobenzamides of Several Aminopyrazolidines: Potential Antiarrhythmic Agents Related to Procainamide," J. Heterocyclic Chem., 30, 109-112 (1993).

Kornet, M.J., Ali, K.A.-N., and Steinberg, M.L., "Synthesis of p-Aminobenzamides of Aminopiperidazines as Potential Antiarrhythmic Agents," J. Heterocyclic Chem., 31, 967-971 (1994).
