SYSTEM ID: KY 11

NARRATIVE DESCRIPTION

KY 11 is primarily a branched system in Kentucky with the following assets: 28 Tanks, 21 Pumps, 1 Water Treatment Plant, and approximately 1467297 feet of pipe. KY 11 provides 1.93 million gallons of water per day to its 5,330 customers at a rate which ranges between \$9.00 and \$12.00 per 1,000 gallons of water. Water loss for KY 11 is estimated at 21% of the water produced.

NETWORK SCHEMATIC:

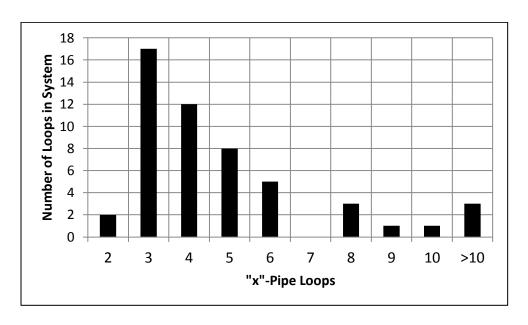

HISTORY OF THE NETWORK FILE

KY 11 was originally created by Matthew Jolly and Amanda Lothes in 2012 as part of the journal article "Research Database of Water Distribution System Models" which was published in 2014 in the *Journal of Water Resources Planning & Management*. This model was updated by Stacey Schal in 2013, and then updated again by Steven Hoagland in 2014.
