AT-001 for Long-term Preservation of brain Health in Aging: The ALPHA study

What is the purpose of the ALPHA study?
The ALPHA study will evaluate whether the use of a yeast-selenium supplement (AT-001) is safe and whether it may help improve brain health in individuals who do not have dementia.

What does the ALPHA study involve?
Participants will receive either the study drug or placebo for one year. Participants will have five visits over the course of 13-14 months. Visits will include MRI brain imaging, blood work, spinal fluid collection, routine physical exams, and memory testing. Your health will be closely monitored by a team of doctors and medical staff, at no cost to you.

Researchers are looking for persons who:
- Are 65 years of age or older
- Do not have a diagnosis of dementia
- Are in good general health
- Are able to have an MRI scan
