Join the Alzheimer's Disease Center Research Team!
Your participation helps us to better understand memory and thinking disorders that affect the elderly, such as Alzheimer's disease. Research discoveries that will lead to cures for diseases such as Alzheimer's, Frontotemporal dementia, Dementia with Lewy Bodies, Vascular Dementia, and other related diseases, are only made possible through research participation by persons like you and your loved ones.

The Research Memory Clinic provides ongoing care to its participants, and collects important research data in life that is used to interpret findings in the brain at autopsy.

Participation in this study includes annual physical exams by the physician, annual neuropsychological evaluations and year round caregiver support for the remainder of the person’s life.

Autopsies are performed for definitive diagnosis and for research. The final diagnosis from the autopsy is shared with the family.

Who Can Participate?

Anyone who

- is experiencing memory or thinking changes that represent a decline in prior levels of functioning.
- is willing to undergo yearly exams.
- agrees to donate his/her brain at death for research purposes.
- resides within 60 miles of Lexington.

Participation is open to persons of any gender, racial background, and ethnicity.

What Can You Expect?

- Our team includes neurologists, social workers, a geriatrician, neuropsychologists, and other staff to support you and your family.
- Recommendations for ongoing treatment.
- Family support and educational services.
- Family counseling available upon request.

Who Pays?

Annual exams and family support services are provided at no charge to the participants.

Medications and diagnostic tests are billed to health insurance.

The Alzheimer’s Disease Center Research Memory Clinic is funded by a grant through the National Institute on Aging.

Donations to our research are always welcome!

Our Medical Staff: Greg Jicha, MD, PhD
Ronan Murphy, MBChB
