

Leveraging Partnerships for Improved Research Translation

The University of Kentucky SBRP Research Translation and Community Outreach Cores

Dr. Lindell E. Ormsbee, Dr. Lisa Gaetke, Carolyn Hofe, Anna Goodman Hoover, Stephanie Jenkins

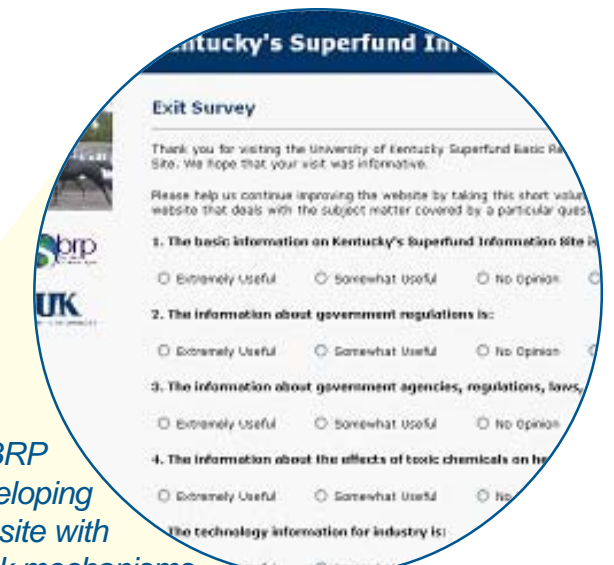

Superfund Community Action through Nutrition (SCAN) programs allow UK-SBRP Outreach PI Lisa Gaetke (left) to interact with impacted populations.

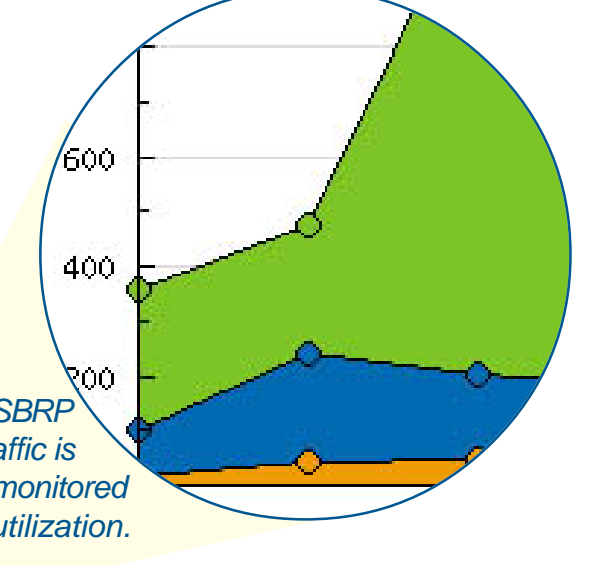

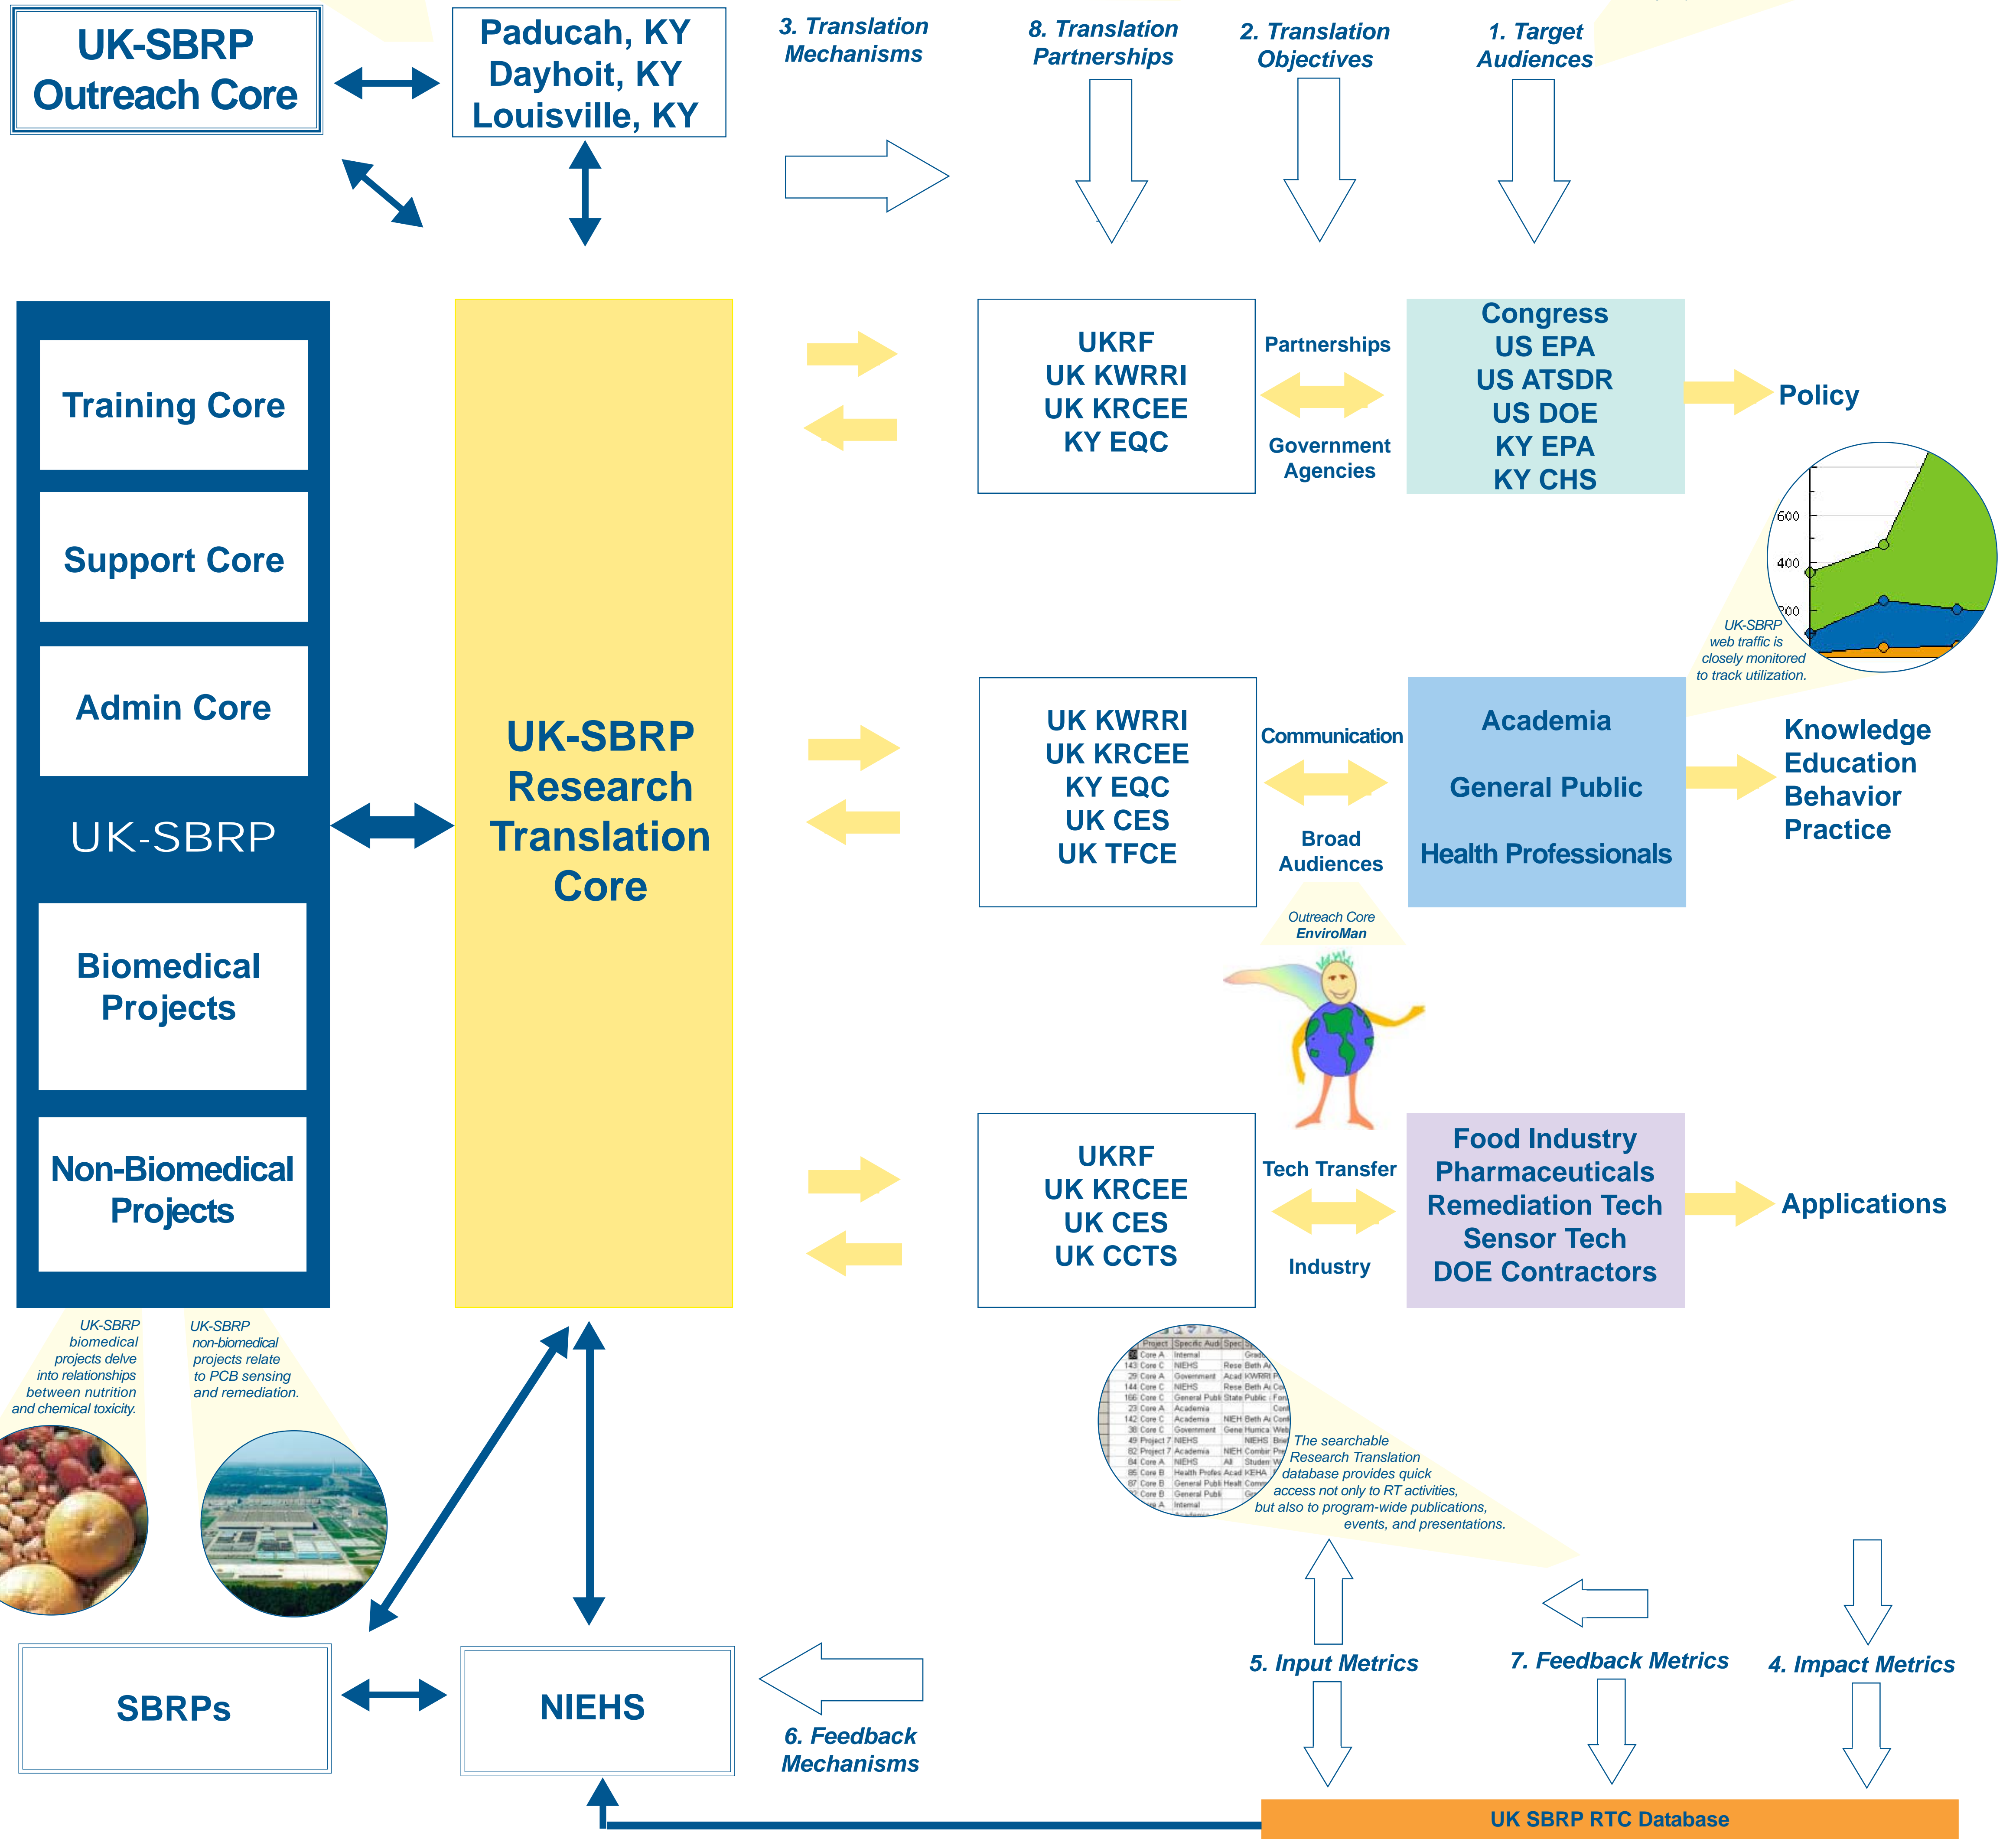

The University of Kentucky Superfund Basic Research Program Research Translation and Community Outreach Cores have forged a close relationship to promote improved communication with a number of constituencies. The Cores have expanded this collaboration to include government agencies, industry, and other units within the university itself. This allows the UK-SBRP to leverage stakeholder partnerships to ensure successful, widespread, audience-specific communication of research findings and their implications. This is accomplished through joint meetings, publications and other information dissemination avenues. Among the partners are:

- University of Kentucky Center for Clinical and Translational Science
- Kentucky Research Consortium for Energy and the Environment
- University of Kentucky Cooperative Extension Service
- Kentucky Water Resources Research Institute
- Kentucky Environmental Quality Commission
- Tracy Farmer Center for the Environment
- NIEHS and the SBRP RT Network

UK-SBRP RTC is developing a tailored website with built-in feedback mechanisms to better focus information delivery to specific audiences.

The searchable Research Translation database provides quick access not only to RT activities, but also to program-wide publications, events, and presentations.
