May 31, 2018

014 Charles T. Wethington Building,
900 S. Limestone St.
Lexington, KY 40536

Click HERE to register online

Office of Continuing Education
Target Audience:
Nurses, nurse practitioners, nurse educators, health educators, and other healthcare professionals acute care, long-term care, clinic, and home health settings.

Heart failure is a chronic illness that causes debilitating symptoms, increased hospitalizations and mortality, and decreased quality of life. Healthcare providers are challenged with finding new and innovative methods in the management of heart failure and its associated symptoms.

The purpose of this much requested conference is to provide nurses with current information on how to manage the complex needs of patients with heart failure in order to improve outcomes and quality of life. Experts in the field of heart failure management will present updated evidence-based information that includes the 2018 management guidelines for patients with heart failure as well as content on advanced treatment therapies, pharmacotherapy, gender differences in heart failure, transition of care and end-of-life issues, and much more!

Learning Outcomes: Participants will be able to apply the latest guidelines and evidence-based recommendations in heart failure management across the entire spectrum of care.

Objectives:
1. Recognize the signs and symptoms suggestive of heart failure.
2. Discuss testing and current management guidelines for patients with heart failure.
3. Describe referral and medical treatment strategies for patients with advanced heart failure, including pharmacologic and non-pharmacologic approaches.
4. Identify appropriate heart failure management strategies that promote self-care management, diet and nutritional needs, support systems, and end-of-life care.
