Reconstructing Historical Sociolinguistic Conditions from Loanwords: The Case of ERIC Loans in the Balkans

BRIAN D. JOSEPH
The Ohio State University

1st Conference of the North American Research Network in Historical Sociolinguistics

LSA Institute – University of Kentucky – 22 July 2017
Main points for today:

• loanwords typically imply a social connection between peoples, via face-to-face interaction and contact that make the loans possible

• they thus offer a basis for looking back to earlier language and social states and of reconstructing the conditions under which the loans could have occurred

• but usual typologies for loanwords miss the full picture of the earlier social conditions

• drawing on collaborative work with Victor Friedman and data from the Balkans, I propose here a new class of loanwords that focuses on the conversational interactions that speakers had and discuss what such loans mean for us as historical sociolinguists
THE BALKANS
From a linguistic standpoint, what is notable about the Balkans:

• multilingualism

• language contact

• Sprachbund (also: “linguistic area”) = a geographic zone where languages, through intense and sustained contact in a mutually multilingual society, have come to converge with one another structurally and lexically and to diverge from the form that they held previously
• structural aspects of Balkan convergence have dominated the literature, e.g. a volitionally based future tense, the use of finite subordination instead of infinitives, the merger of genitive and dative cases, an enclitic (postposed) definite article, the encoding in the verbal system of a distinction between real and presumed information-source (evidentiality), etc.

• but, given the structural focus of most work on the Sprachbund, the lexicon has almost always been treated as somehow beside the point (and in any case, culturally based loans seem not to tell us much about the Sprachbund as they are found in routine non-Sprachbund contact situations)

• that view may be short-sighted, as the lexicon actually has much to offer
A key distinction in Balkan language contact (as shown through the lexicon):

- **object-oriented** interaction (with a particular goal in mind, such as obtaining something (such as information), engaging in a commercial transaction (buying and selling), etc.)

- **human-oriented** interaction (no particular goal beyond the interaction itself, involving (generally) amicable interaction on a personal level)
There is plenty of evidence of the former, but it is the latter that is interesting from the perspective of historical sociolinguistics.
Some standard typologies of loanwords

i) focusing primarily on the FORM of the loan (cf. Winford 2003: 41-46):

• Haugen (1950): importation vs. substitution (“based on the presence or absence of foreignness markers”)

• Haugen (1953): lexical borrowings (“imitation of some aspect of the donor model) vs. creations (“entirely native [with] no counterpart in the donor language” (but based on some nonnative material))
ii) focusing primarily on the CONTENT of the loan:

• Bloomfield 1933 – cultural borrowings (those arising via the exchange, often mutual, of terminology between speakers of different languages, representing different cultures) vs. intimate borrowings (those not obviously linked to cultural objects)
iii) focusing primarily on the MOTIVATION for the loan:

- Hockett 1958 -- need borrowings (essentially Bloomfield’s cultural type, though the motivation of “needing” a word for a (new) cultural item is at issue) vs. prestige borrowings (where the motivation is the “prestige” that the borrowing language speakers accord to material from the donor language)
Some failings with these typologies:

a. by focusing on form, Haugen’s does not build in the social context for the loans

b. the types listed above are not necessarily discrete – a cultural/need loan might be undertaken for reasons of (Hockettian) prestige or be associated with (Bloomfieldian) intimate contact

c. noncultural/nonneed loans are not always a matter of prestige, at least not obviously so; e.g.: Albanian diminutive –zë in Megara Greek liγaza ‘a little’
d. moreover, borrowing implies interaction between/among speakers, but ... “non-interactive” borrowing does occur, e.g.:

- learned borrowings, as with Latin into Romance, or Old Church Slavonic into Bulgarian and Russian, or even Modern Greek *katharevousa* (high-style, Ancient-Greek-based) words adopted into *dimotiki* (low-style, colloquial Modern Greek)
constructed neologisms (as with lots of western medical and other technical terminology, generally with Greek or Latin roots, e.g. encephalography ‘imaging of the brain’, electroencephalography ‘electronic encephalography’, and electroencephalographologist ‘a specialist who studies electroencephalographs’
What these typologies are missing:

• the full dynamics – the full historical sociolinguistic picture -- of the environment in which the borrowing occurs especially as to the MEDIUM through which the borrowing takes place

• this is a particular concern for the Balkans, since the lexical side of the Balkan Sprachbund is only one dimension to the contact-related effects, inasmuch as there is massive structural convergence evident too (in the form of the future tense, in the use of finite subordination instead of infinitives, in the merger of genitive and dative case, etc.)
Motivating a New Type of Loanword (based on work with Victor Friedman):

- Recognize a type of loan phenomenon which is consistent with what is known about contact in the Balkans, the contact that gave rise to the structural convergence (and thus revealing the sprachbund)
**Our hypothesis:**

- Sprachbunds arise under conditions of *sustained, intense, intimate* contact among speakers, with mutual, multi-directional, multilateral multi-lingualism (our “4-M model”)

That is, there is/are:

- **intimacy**, yes, but more than that

- **prestige**, yes, but more than that

- **multiple cultures** (and thus “need” in some sense), but more than that
Therefore, we need: a loan type that …

• corresponds to these conditions

and

• is consistent with Sprachbund formation
Our suggestion:

- base loan typology on the mutual interaction, specifically on conversational interaction, between/among speakers
Therefore, we need to recognize a type of loans that are:

**Essentially Rooted In Conversation**
i.e.:

E.R.I.C. loans
These are loans that depend crucially on speaker-to-speaker interaction of an on-going and sustained kind, the sort of contact that can be characterized as intense and at the same time intimate, as opposed to occasional and casual, human-oriented rather than (solely) object-oriented.
Motivating the acronymic notion, formally and conceptually:

- formally, the acronym is a suitable homage to Eric P. Hamp, the dean of Balkan linguistics, a long-time champion of the study of language contact in general and in the Balkans in particular

- conceptually, the notion offers a way to distinguish between loans that take place under sprachbund-conducive conditions and those that take place under casual contact situations.
• and, it can extend to some sorts of “borrowing” that is not lexical in nature, e.g. the diffusion of expressive phonology (as with the expressive value of [ts]/[tʃ] (and voiced counterparts) in the Balkans (Joseph 1984, Curtis 2008) or gestures (as with the upward head nod for ‘no’))
To elaborate:

- face-to-face interaction, of the sort that would necessarily have occurred under the intense and on-going contact among speakers in the Balkans, is essential for creating and propagating the structural convergences typically taken as diagnostic of a sprachbund
• and, that certain kinds of loanwords occur in such a social milieu is a bonus of sorts, and means that the loan words can be both an *indicator* that contact conducive to the formation of a sprachbund is taking place and a *by-product* of such contact.

• that is, these are loans that tell us something about speaker contact and about the sociolinguistics and the socio-history of the region
• this view draws on the notion of “degrees of contact”, as recognized explicitly in the Thomason & Kaufman 1988 “scale of borrowability”, where the borrowing of different types of linguistic material is claimed to correlate with different levels of intensity of contact among speakers.
• our contention is that, consistent with this scale, certain types of loanwords, especially those embedded in discourse and in conversational use and those that go beyond simple exchange of information, correlate with the intense, sustained, and intimate contact that is necessary for the formation of a linguistic area with structural convergence, i.e. a sprachbund.
• these loans are “sprachbund-consistent”, since they represent those lexical elements that most directly reflect the sort of language contact that is consistent with the emergence of a sprachbund, namely sustained intense contact on a day-to-day basis in a multilingual milieu.

• many ERIC loans are members of closed lexical classes, representing vocabulary domains that are generally held to be somewhat resistant to borrowing, and yet they are borrowed
A strikingly thorough-going case in the Balkans -- the entry of Turkish words into Macedonian (Friedman 1986):

• virtually all categories of Macedonian lexical items, covering virtually all sectors of the vocabulary, have been affected by Turkish borrowings, but note that many fall into ERIC classes:
“The large number of Turkish lexical borrowings belong to all levels of vocabulary and almost all parts of speech, e.g. džeb ‘n. pocket’ (ceb), bendisa ‘v. please’ (beğen-), taze ‘adj. fresh’ (taze), badijala ‘adv. for nothing’ (badihava), ama ‘conj. but’ (amma), karši ‘prep. opposite’ (karši), iç ‘pron. nothing’ (hiç), sikter ‘ excl./interj. scram’ (siktir), keški ‘part. if only’ (keške). The only Macedonian traditional part of speech lacking Turkisms is the numeral, although there are Turkisms in numerical expressions, e.g. čerek ‘quarter’, and Turkish numerals in other parts of speech, e.g. bešlik ‘five-grosch silver coin’ … Turkish vocabulary has penetrated every facet of Macedonian life:

urban and rural, e.g. duk´an, ‘shop’ (dükkân), sokak ‘street, alley’ (sokak), ambar ‘barn’ (hambar), endek ‘ditch, furrow’ (hendek); man-made and natural, e.g. tavan ‘ceiling’ (tavan), šiše ‘bottle’ (şişe), zumbul ‘hyacinth’ (zümbül), taftabita ‘bedbug’ (tahtabiti);

intimate and abstract, e.g. džiger ‘liver, lungs’ (ciğer), badžanak ‘brother-in-law (wife’s sister’s husband)’ (bacanak), rezil ‘disgrace’ (rezil), muabet ‘conversation’ (muhabbet).”
Classes of ERIC loans (with examples to follow from all around the Balkans), going beyond Friedman’s Turkish → Macedonian instances
• Kinship terms
• Numerals
• Pronouns
• Adpositions
• Negatives
• Complementizers
• Discourse elements (interrogatives, connectives, attitudinal expressives, interjections, gestures)
• Vocatives

• Onomatopoeia

• Reduplication (especially of an expressive nature)

• Expressive phonology

• Idioms (and phraseology more generally, even shared proverbs)

...
Examples of Loans in these Classes (a sampling, not exhaustive)

• Kinship terms

Turkish *baba* ‘father’ ➔ Albanian, Aromanian, Greek *baba* ‘father’ (and labeled an archaism in contemporary Macedonian and Bulgarian sources, suggesting that it was in wider use in earlier times)

Greek *patera* ‘father’ ➔ Aromanian (in Greece) *patera*

Turkish *nene* ‘mother’ ➔ Albanian *nënë*, Greek *néné*

Turkish *dayi* ‘maternal uncle’ ➔ Alb *dajë*, Mac *daja*

Greek *tsatsa* ‘aunt’ ➔ Aromanian *țăță* (surely connected to Turkish *çaça* ‘woman who keeps a brothel’ but that is said to be from Greek)
• Numerals

Romany borrowing of '7'/8'/‘9’ (from Greek)

‘11’ – ‘19’ as ‘DIGIT-on-TEN’, e.g. Albanian pesë-mbë-dhjetë

‘15’ (widely cited in the literature as Slavic in origin but Albanian and Romanian disagree with Slavic in the gender of ‘ten’ in various formations, so this pattern may have a different origin and may in fact reflect some very early Albanian (“Albanoid”) input (cf. Hamp 1992))

Turkish numerals in Balkan languages (e.g. in Pomak (Balkan Slavic) in Greece today, digits for ‘five’ and above are all Turkish).
• **Pronouns**

• Turkish *hic* ➔ Macedonian *ič*, Albanian *hic* ‘nothing’

Greek *mu* ‘my’ ➔ Aromanian –*m* (vs. native –*n’i* (from Latin *mihi*, presumably via *mnihi*)

Turkish *bu* ‘this’, *kim* ‘who?’ ➔ Ottoman-era Adrianople Greek *bu* ‘this’, *kim* ‘who’ (only in *bu kim* ‘who (is) this?’)
• Adpositions

Turkish *karşı* (*karşi* in Balkan Turkish) 'opposite' → Albanian *karshi* (also in Aromanian, Bulgarian, Ottoman-era Adrianople Greek, and Macedonian (in Arom & Grk as a postposition)

Turkish *gibi* ‘like’ (postposition) → Ottoman-era Adrianople Greek *gibi* ‘like’ (postposition)

Greek *me* ‘with’, if a borrowing from Albanian *me*, since derivation of Greek from Ancient Greek *metá* is problematic (requiring several ad hoc assumptions)
• Negatives

Greek *mi* ‘prohibitive negator’ ➔ Vardar Macedonian and Aromanian *mi*

Greek *oxi* ‘no’ ➔ Southern Aromanian *ohni* (Vrabie 2000)

Turkish *hiç* ‘mere trifle; nothing’ ➔ Ottoman-era Adrianople Greek *hit∫* ‘never; (not) at all’

Trk *ne…ne* ‘neither…nor’ ➔ Agia Varvara Romani
Upward head nod for negativity (found at least in Greek, Romanian (older generations), and Turkish) — Greek is a likely source, given what is known about Ancient Greek gestures and the fact that the distribution especially in Italy coincides with geographic limits of Magna Graecia)
• Complementizers

Greek *(h)oti* ‘that’ ➔ Macedonian *oti* ‘that’

Greek *(h)o, ti* ‘for that reason’ ➔ Macedonian/Bulgarian *oti* ‘because’

Turkish *zira* ‘because’ (from Persian) ➔ Bulgarian *zerem*
• Discourse elements (interrogatives, connectives, attitudinal expressives, interjections, gestures)

NB: These are ERIC forms, since they serve as the "glue" of everyday interactions between people, and include markers of common discourse strategies (e.g. questioning) as well as frequent discourse “particles” and indicators of an individual's status relative to other interlocutors (e.g. solidarity, distancing, etc.) but also those that serve a purely expressive purpose (i.e., elements that add "color" to conversation):
INTERROGATION

Trk *mi/mü/mi/mu* ‘(focalizing) marker for yes-no questions’ ➔
Ottoman-era Adrianople Greek *mu* ‘marker for yes-no questions’

-- round back harmonic form borrowed (adopted without adaptation)

-- postpositive in OAG, as in Trk, though slightly different (phrase-final in OAG, post-focus in Trk)

-- has other, more discourse-based functions, in OAG: “it offers many nuances that accompany interrogativity: irony, doubt, challenging, swearing (an oath)” (Ronzevalle 1911)
--examples:

buríš mu
can/2sg QN
‘Can you (do it)?’
(Standard Greek: *borís*;)

θa ‘rt’s mu
FUT come/2sg QN
‘Will you come?’
(Standard Greek: *θa ‘rθis*;)
ATTITUDES / AFFIRMATION

provincial Turkish (nonharmonic) *de* ➔ Greek *de* (signaling impatience), Albanian *de* (emphatic with imperatives), Macedonian *de* ‘c’mon’ (or possibly of Slavic origin, cf. verbal root *dě*- ‘put’ (or ‘say’?)

Slavic *da* ‘yes’ ➔ Bitola Aromanian *da*

Albanian *po* ‘yes’ ➔ Aromanian (dialectal) *po*

Greek *malista* ‘yes (indeed)’ ➔ Aromanian (dialectal) *malista*
CONNECTIVES

Mac i ‘and’ ➔ Aromanian (in Macedonia)

Trk hem ‘and, too, and yet’ ➔ OAG hem ‘and; too’

Trk hem … hem ‘both … and’ ➔ Alb, Blg, Mac, Romani

Trk ya … ya ‘either … or’ ➔ Alb, Armn, Blg, Grk, Mac, Romani

Mac ili ‘or’ ➔ Trk (dialect spoken in Macedonia)
ama/ami/ma/mi ‘but (and various adversative nuances of meaning’ (whatever its origin, it has spread all over the Balkans, found in each of the languages; cf. Fielder 2010)

Trk ancak ‘but, on the other hand’ ➔ Alb (anxhak), Armn (anğeac, though in the meaning ‘almost, finally’), Blg (andžak)

Trk illâ ve lâkin ‘but on the other hand’ ➔ Alb (velakin), Blg (illja veljakim / illjakim), Armn (eleakim / ileakim)

Trk me(ğe)r ‘but; however’ ➔ Blg meger / mer

OTHER SENTENCE ADVERBS / MITIGATING MODIFIERS

Trk bile ‘even; already’ Alb bile ‘even; in fact’, Armn bile, Blg biljá(m)/bilé(m), Rmni bila(m)/bilim

Trk hemen ‘almost, nearly’ Blg hemen; Grk (of Edirne) emén

Trk sade ‘only’ Alb sade, Armn sade, Blg sa(a)dé, DRom Grk (of Edirne) sadé, Rmni sáde/sadé

Trk salt ‘only’ Alb sall(a)/sallde/sallte (dialectal), Blg sal/sált(e), MRom sal/sāl, Rmni saltsə

Trk tamam ‘just right; there you have it!’ Alb tamam/taman, Armn tamam/tamamá/tamamaná, Blg tamám/tamán, DRom (dialectal) taman, Grk (dialectal) tamam(i), MRom tamam, Rmni tamami

Rmn mai almost Blg mai (Banfi 1985: 100)
‘unceremonious term of address’ (lots of variants, almost all ultimately from Greek, where dialectally some 55 different forms are found, almost all stemming from AncGrk *more* (vocative of ‘foolish’), cf. Joseph 1997):

Turkish:    *bre, bire, be*
Albanian:   *o, ore, or, mor, more, moj, ori, mori, moré, mre, voré, bre*
Romanian:  *bre, mă, măi*
Bulgarian:  *more, mori, bre*
Macedonian: *more, mori, bre*
Serbian:    *more, mori, bre*
Judezmo:    *bre*
Greek:      *moré, bre, vre, re, aré, maré, marí, oré, voré, etc.*
EXHORTATIVES

Turkish *(h)ay de* ➔ Romanian: *haide*, Serbian *hajde*, Albanian *hajde*, Greek *aide* 'c'mon'

Greek *ela* 'c'mon' ➔ Bulgarian *ela*

Trk *ha* ‘a call to action’ ➔ OAG *ha*
GREETINGS

Trk *merhaba* ‘hello’ ➔ Blg *maraba*, OAG *merhaba*

Grk *geia sou* ([ja su]) ‘hello’ (lit.: “health to-you”) ➔ Armn

Trk *uğurlar olsun* ‘good luck! good journey’ (literally “good-omens may-there-be”) ➔ OAG *urular olsun* ‘goodbye’

Trk *oğlu-m* ‘son-my’ (term of endearment) ➔ OAG *oylum*

Trk *can-im* ‘soul-my’” (term of endearment) ➔ OAG *dźanim*

‘bird’ in terms of endearment (direction unclear): Alb *zogu im*, Grk *poulí mu* (both “bird my”), Blg *pilence*, Armn *puıłu*, DRom *puiule* (all diminutives, “little chick”).
• **Vocatives**

Blg preservation of VOC versus loss of all other cases (VOC as quintessentially conversational “case”), and note too coincidence of Grk VOC.SG of MASC o-stem nouns, e.g. *Petre* ‘(O) Petros!’ with Blg VOC.SG of MASC o-stem nouns, e.g. *Ivane* ‘(O) Ivan’ and the role that may have played in Blg VOC-preservation

Albanian *biro* ‘O son!’, *Agimo* ‘O Agim!’”, with –o apparently from Slavic vocative

Romanian vocative endings influenced by Slavic, cf. especially –*e-le* (FEM.PL), apparently with Slavic vocative particle –*le*
• **Onomatopoeia** (*vel sim.*)

‘dog noise’: Albanian *ham-ham*, Romanian *ham*, Greek *yav yav*, Turkish *hav hav*, Macedonian *av av*, Romani *hau-hau*, Bulgarian *bau-bau*

‘knocking’: Albanian *tak-tak*, Greek *tak tak*

‘noise for attracting a cat’: Greek *psi psi psi*; Bulgarian, Romanian *ps ps ps*
• **Reduplication** (especially of an expressive nature)

Turkish affective $m$-reduplication (e.g. *kitap-mitap* ‘books and such’) ⇒ various languages, e.g.:

**Alb**  *shiri-miri* ‘confusion’
*cingra-mingga* ‘trivia’
*çikla-mikla* ‘tiny bits and pieces; crumbs; trivia’

**Blg**  *knigi-migi* ‘books and such’
*xår-mår* ‘grumbling, tiff, discord, disagreement’ (Trk *hur mür* ‘quarrel’)

**Mac**  *kal-mal* 'mud or whatever'

**Rmn**  *ciri-miri* ‘confusion’
Jud  *livro mivro* ‘books and such’
   *sapatos mapatos* ‘shoes, shmoes’ (Bunis 1999)

Grk  *tzantzala mantzala* ‘rags and such’
   *ta sandala ke ta mandala* ‘stuff and things’ (OAG)
   *surðu murðu* ‘topsy-turvy’ (Levkas dialect)
   *i sara ke i mara* ‘Tom, Dick, and Harry; ragtail and bobtail’
   *ara mara* ‘who cares?’
   *ares mares (kukunares)* ‘nonsense’
Turkish-style CVC- intensive prefixing (e.g. beyaz ‘white’ / bem-beyaz ‘pure white’):

Greek tsiplakis ‘naked’ / tsir-tsiplakis ‘stark naked’

Bulgarian baška ‘other / bambaška ‘very particular’
   gol-golenicăk ‘stark naked’

Macedonian gol-goleničok 'stark naked'

Romanian gol-goluţ 'stark naked'

BCS go-golest 'stark naked'
• Expressive phonology

-- one or more of [ts]/[tʃ] and voiced counterparts [dz]/[dʒ] can be shown to have special affective ("allolinguistic") value in Greek (Joseph 1984) and Albanian (Curtis 2008), as measured partly by their *lexical distribution*, found primarily in onomatopoeia, in highly connotative words (that add “color” to conversation), and in borrowings (thus outside the native system per se)
Turkish < ç > (= [tʃ]) also figures in onomatopoeia and other such “evocative” words (Marchand 1953)

--thus, the development of the Greek and Albanian expressive sounds may well have been influenced by Turkish here (and cf. the generally low-stylistic value accorded Turkisms (Kazazis 1972))
• Idioms (and phraseology more generally, even shared proverbs)

Friedman 1986 on Macedonian:

“the use of jade 'eat' to mean 'be subjected to' as in jade k´otek 'get a beating' (literally 'eat a blow') is obviously based on Turkish kötek yemek 'ibid.', and so jade dožd 'get soaked' ('eat rain', Tk yağmur yemek) or jade gomno 'say something stupid/embarrassing' ('eat excrement', Tk bok yemek, cf. English to put one's foot in it) can likewise be identified as calques.”
Various everyday expressions (directionality unclear):

Greek *pos ise? (ime) kala* ‘how are-you? I-am well’ (thus, ‘be’ with ADVERB)

= Albanian *si je? (jam) mirë* (mirë as adverb with ‘be’, not adjectival form),

= Macedonian *kako si?  dobro* (adverbial form)

= Bulgarian *kak si?  dobre* (adverbial form)

= Romani *sar sijan?  shukar*

= Turkish *nasilsin? iyi.*
Alb. sa bën ‘how much does it cost?’ (literally “how-much does-it-make?”) = Greek poso kani ‘idem’

Greek to ksero ap' ekso 'I know it by heart' (lit: "it I-know from outside") = Agia Varvara Romany (Messing 1988: 61) dzanav-les avral (avral = 'from outside, from abroad')
One final clearly conversational example (Joseph 2011): 

- an expression used by some Greeks (maybe obsolete now but it did exist) in the game of “peek-a-boo” that adults and older children play with young children:

  \[ buli buli buli buli \ldots dza \]

- the *buli* part (repeated four times) comes when the face is covered up by one’s hands and the *dza* part comes when the hands open up to reveal the face.
Where does this come from?

- in Greek, *buli* is just a nonsense word

- *dza* (with variant *tsa*) = an interjection marking surprise or indicating something like “here I am (somewhat unexpectedly)”
But where does that *dza* come from?

- The only dictionary to comment on its source says it is a “nursery word”, and its use and form do make sense in that regard, based on Greek [ts/dz]'s special expressive (“allolinguistic”) status – a marked functional status for linguistic elements involving being on the margins of “core” information-oriented communication (Joseph 1982, 1984, 1994 and elsewhere).

- Still, even with an allolinguistic rationale for *tsa/dza*, one has to ask why, if the word has a nursery-related origin, it has the particular form that it does.
• But, there is a compelling source for tsa/dza from a language outside of Greek:

• Albanian has an interjectional word spelled < xa > (phonetically [dza]) that, as listed in Mann 1948, has a meaning ‘here you are’.

--this presentational meaning fits in well in the game of peek-a-boo as the sound that accompanies revealing of the face
--so, if this source of the Greek utterance is accepted, this form would have entered Greek either through direct contact with Albanians, e.g. in northwestern Greece, or through contact with Arvanitika, the Albanian dialects spoken mainly in Central Greece, Attica, parts of the Peloponnesos, etc.
But what about the rest, the *buli* part?

• that too has a compelling source in Albanian:

  -- [buli] can be related to the Albanian verb *mbyll* ‘close, shut’
    (3sg past)

• thus, the phrase in its etymological meaning would be:

  -- “[when the hands cover the face] (it-has-)closed,
    (it-has-)closed, (it-has-)closed, (it-has-)closed …
    [when the hands open up to reveal the face] Here-it-is!”. 
Phonetically the Greek [boli] would be an expected rendering of Albanian *mbyll*:

--the initial *b*- for Albanian [mb] conforms to prevailing Greek phonotactics at the likely time of borrowing (with voiced stops without a nasal “prop” being allowed in word-initial position)

-- so also Greek [l] for Albanian “dark” < ll>

-- the [u] for the Albanian front rounded [y] vowel (Arvanitika has [i] for general Tosk [y] but i > u in labial + sonorant contexts occurs sporadically in Greek.)
This would have been borrowed only through use, presumably by Arvanitika speakers using it to play with Greek babies (and thus made available to Greek speakers) or by Greeks over-hearing Arvanitika speakers using it with their own babies.

Either way, the **conversational** element and ‘**intimate**’ contact are paramount here.
We can thus conclude, based on these ERIC loans, that peoples in the Balkans in the Ottoman era (earlier too, but the Ottoman era was formative for the Sprachbund) were talking to and interacting with one another, and doing so under human-oriented conditions.

These loanwords thus offer us a glimpse into the social conditions in the Balkans some 500 years ago, thus fulfilling a goal of historical sociolinguistics.
