
Dips may also be associated with paleochannels in the Lower Elkhorn coal bed, Knox County, Kentucky: International Journal of Coal Geology, v.18, p. 211–231.

Coal-Rider Roof Falls

Multiple, 5- to 10-ft coal riders are common above the Lower Elkhorn coal bed, especially in the eastern parts of the coal, where the beds are thick. Multiple 5- to 10-ft coal riders are common above the Lower Elkhorn coal bed and are often associated with fireclays, interbedded coal and siltstone, which separate the sequence of the coal. Where thick coal beds are also present, multiple 5- to 10-ft coal riders are common above the Lower Elkhorn coal bed. Multiple 5- to 10-ft coal riders are common above the Lower Elkhorn coal bed.
