

Cow Creek watershed (051002-04-060)

**Geography.** The Cow Creek watershed is located in north-central Estill County. Most of the watershed is in the escarpment area of the Eastern Coal Field physiographic region, which is characterized by hilly terrain, very rapid surface runoff, and moderate rates of groundwater drainage. The lowest, southern section of the watershed is in the Knobs physiographic region, characterized by hilly terrain, very rapid surface runoff, and very slow groundwater drainage. In level parts of the Knobs, runoff and groundwater drainage are slow. The watershed is underlain by coals, sandstones, and shales: this geology is generally conducive to productive wells, although water quality may be low for wells that draw from coal layers. Parts of the watershed lie over easily weathered clay shales that store water but allow little groundwater flow. Other parts of the watershed lie above interbedded clay shales and siltstones.

**Waterways.** Cow Creek empties into the Kentucky River at Ravenna. Among the creeks that feed it are Rogers Fork, Tickey Fork, and Campbell Creek.

**Land and water use.** Land in the watershed is mainly rural and wooded; about 5% is agricultural. Four businesses and organizations hold permits for discharges into the creeks. See the 2000 Assessment Report for full details.

**Agency data assessment.** The assessed creek segments in this watershed fully support their designated uses, based on biological and/or water-quality data. See the 2000 Assessment Report or 2000 305(b) list and the 2002 303(d) list of impaired streams for full details.

Watershed Highlights

Watershed covers 17 square miles.
Part of source water protection zones 1, 2, and 3 for the Irvine water system.
Watershed is in PRIDE service region. PRIDE identified 3 straight pipes or failing septic systems in the watershed.
