Civil Engineering

The student of civil engineering has a broad field of study to provide a strong foundation for entry into the profession or graduate school. Major areas include construction engineering and project management, environmental engineering, geotechnical engineering, materials engineering, structural engineering, transportation engineering, and water resources engineering.

Admission to the degree program is selective. Students should refer to the UK Bulletin for general information concerning admission and graduation requirements.

Degree Requirements

The following curriculum meets the requirements for a B.S. in Civil Engineering, provided the student satisfies UK Core and College of Engineering requirements.

First Semester Hours
CE 120 Introduction to Civil Engineering .................................................. 1
CIS/WRD 110 Composition and Communication I ...................................... 3
MA 113 Calculus I ................................................................................ 4
UK Core – Arts and Creativity ................................................................. 3
UK Core – Social Sciences ..................................................................... 3

Second Semester
CE 106 Computer Graphics and Communication ........................................ 3
CHE 105 General College Chemistry I ..................................................... 4
MA 114 Calculus II ................................................................................... 4
PHY 231 General University Physics .......................................................... 4
PHY 241 General University Physics Laboratory ......................................... 1

Sophomore Year

First Semester Hours
CE 211 Surveying .................................................................................. 4
CHE 107 General College Chemistry II ..................................................... 3
EM 221 Statics ........................................................................................ 3
STA 381 Engineering Statistics – A Conceptual Approach
  or CE approved equivalent .................................................................. 3
MA 213 Calculus III .................................................................................. 4

Second Semester
CS 221 First Course in Computer Science for Engineers .......................... 2
EM 302 Mechanics of Deformable Solids ............................................... 3
MNG 303 Deformable Solids Laboratory .................................................. 1
MA 214 Calculus IV ................................................................................ 3
PHY 232 General University Physics ......................................................... 4
PHY 242 General University Physics Laboratory ...................................... 1
CIS/WRD 111 Composition and Communication II .................................... 3

Junior Year

First Semester Hours
CE 303 Introduction to Construction Engineering* .................................... 3
CE 329 Civil Engineering Communications and Teams Lab .......................... 1
CE 341 Introduction to Fluid Mechanics .................................................. 4
CE 381 Civil Engineering Materials I* ...................................................... 3
EES 220 Principles of Physical Geology ................................................... 4

Second Semester
CE 331 Transportation Engineering* ....................................................... 3
CE 351 Introduction to Environmental Engineering .................................... 3
CE 382 Structural Analysis ..................................................................... 3
Engineering Science Elective [1] ............................................................. 3
Math Elective or Science Elective [2] ......................................................... 3
UK Core – Humanities .......................................................................... 3

Senior Year

First Semester Hours
CE 461G Water Resources Engineering* .................................................. 4
CE 471G Soil Mechanics* ................................................................. 4
CE 48X Structures Elective [3] ................................................................. 3
UK Core – Citizenship - US ................................................................. 3

Second Semester
CE 401 Seminar* ................................................................................. 1
CE 429 Civil Engineering Systems Design* ............................................. 3
Supportive Elective [6] .......................................................................... 3
UK Core – Global Dynamics .................................................................. 3

*CE communication throughout the curriculum component.

[1] To be chosen from ME 220 or EM 313.

  BIO 208, CHE 230, CHE 236, EE 305, GEO 409, EES 550, EES 585, MNG 551,
  or the other half of the Engineering Science Elective in [2]. NOTE: MA 322 is required
  for a math minor.

[3] To be selected from: CE 482 or CE 486G.

[4] Students are required to select two design electives from different areas. Choose
  from: CE 508, CE 531 or CE 533, CE 534, CE 549, CE 551, CE 579, CE 589. Design
  elective courses are typically taught once a year.

[5] CE Technical Elective is chosen from any of the courses at the 300-level or above
  that carry a CE prefix and in which a student is qualified to enroll, exclusive of required
  courses. Engineering elective courses are typically taught once a year.

[6] Supportive elective is to be chosen from any University course, excluding a more
  elementary version of a required course, such as precalculus mathematics or PHY
  211. However, each CE area has at least one recommendation for the supportive
  elective. Please review the Optional Concentration section in the Civil Engineering
  Undergraduate Handbook. The supportive elective can be taken pass-fail.
