Problems

Show all work. Do not answer the question on the question sheets. Use the blank sheets of paper provided to you.

1. Company X has a total debt ratio of 60%. Sales are $40,000,000 and total asset turnover is 2. They have also reported a net income (profit) of 15 cents per dollar of sales.
   i. What is X’s return on equity (ROE)? (7 points)
   ii. X always pays 80% of all net income in dividends. There are 3,000,000 shares of stock outstanding. The net income (thus, the dividends) are expected to decrease by 3% every quarter, and investors demand an annual return on the stock of 16% (APR), what is a fair price for the stock? (8 points)

2. The following information is from Company Y’s stock quote:
   - Opening price: $12.00
   - Closing price $10.00
   - Day’s hi: $13.00
   - Day’s lo: $10
   - Volume: 321,000 shares
   - 52-week hi: $32.33
   - 52-week low: $10.00

   (a) Construct a candlestick chart for Y. (7 points)
   (b) After you look at the candlestick charts for Y for the last two weeks, you notice a specific pattern, known among technical analysts as “the bull is about to wake up pattern,” which is interpreted as a bullish signal about the stock. As an informed investor, you also know that the markets are semistrong form efficient (i.e. the semistrong form of EMH holds). What would be your recommended course of investment for Y’s stock? Why? (8 points)

3. Company Z, which has just gone public, will make quarterly dividend payments, which start next quarter and will remain at $1 per share for the next two years (8 quarters). Afterwards, the dividends are expected to grow at a quarterly rate of 6%. Investors require an annual return of 36% from Z’s stock.
   i. What would be a fair price for the stock now? (5 points)
   ii. If you plan on selling the stock in 5 years, how much would you expect to receive, i.e. what will the stock price be 5 years from now? (5 points)
