

KENTUCKY RASTER GRAPHIC (KRG) DATASET

ABSTRACT

The Kentucky Raster Graphic (KRG) is a raster image of a scanned USGS topographic map, and may or may not include the collar information. KRG tiles produced without the collar data have been merged with portions of adjacent tiles to form a set of images capable of being combined for mosaic purposes. A separate GIF image of the bottom collar data is included in each respective KRG ZIP file download available at the KRG web site given below.

The KRG dataset is georeferenced to the Kentucky Single Zone State Plane Coordinate System.

PURPOSE

A KRG is useful as a source or background layer in a GIS, as a means to perform quality assurance on other digital products, and as a source for the collection and revision of DLG data. KRG's can also be merged with other digital data, e.g. DEM's or DOQ's to produce a hybrid digital file such as shaded relief background imagery.

STATUS AND UPDATE FREQUENCY

The status of the KRG dataset is complete and the update frequency is irregular.

TIME PERIOD FOR WHICH THE DATA IS RELEVANT

Refer to dates for the individual KRG tiles as provided in Appendix A.

PUBLICATION INFORMATION

This dataset was created through a creative partnership between the Kentucky Natural Resources and Environmental Protection Cabinet, Office of Information Services (NREPC-OIS) and the Kentucky Geological Survey (KGS).

The KRG dataset is published by Kentucky NREPC-OIS through the Kentucky Martian Image Center at:

<http://kymartian.ky.gov/krgmaps/index.html>

ORIGIN OF DATA SOURCE

ORIGINATOR: United States Geological Survey (USGS)

GEOSPATIAL DATA PRESENTATION FORM: "map"

TYPE OF SOURCE MEDIA: "paper"

DATA SOURCE NAME: 7.5 Minute Topographic Quadrangle

PUBLICATION PLACE: Reston, VA

PUBLISHER: USGS

SOURCE SCALE DENOMINATOR: 24,000

SOURCE CURRENTNESS REFERENCE: "ground condition"

SOURCE CONTRIBUTION: The source map is scanned to produce the KRG.

PUBLICATION DATES: See APPENDIX A

USGS CONTACT: Earth Science Information Center,
U.S. Geological Survey Contact Address

SPATIAL INFORMATION

Original Map Scale: 1:24,000

HORIZONTAL COORDINATE SYSTEM:

Kentucky Single Zone State Plane Coordinate System (10 KAR 5.010):

Lambert Conformal Conic Projection

Linear Unit of Measure: U.S. Survey Foot (1 USFt = 1200 / 3937 meter)

NAD83 Datum - GRS80 ellipsoid

Semimajor axis: 6,378,137 meters

Reciprocal of flattening (1/f): 298.25722210088

Central Meridian: 85 deg 45 min West Longitude

Base Parallel: 36 deg 20 min North Latitude

South Standard Parallel: 37 deg 05 min North Latitude

North Standard Parallel: 38 deg 40 min North Latitude

False Northing: 1,000,000 meters

False Easting: 1,500,000 meters

RASTER DATASET INFORMATION

Raster Format: TIFF

Origin Location: Upper Left Corner

Data Compression Type: Packbits

Raster Cell Size (300 dpi @ 1" = 2000'):

x distance: 6.6667 feet

y distance: 6.6667 feet

Number of Raster Bands: 1

Color depth: 8 bits per pixel

Color Map Table

Color	Name	Red	Green	Blue
0	White	255	255	255
1	Red	255	0	0
2	Lt Red	250	190	190
3	Purple	135	50	130
4	Lt Purple	240	170	255
5	Brown	125	75	50
6	Med Brown	175	105	80
7	Lt Brown	205	165	140
8	Blue	0	140	150
9	Lt Blue	155	240	240
10	Green	200	235	175
11	Grey	190	190	190
12	Black	0	0	0

PROCESS DESCRIPTION

1. Production of a KRG begins with the scanning of a paper 7.5-minute topographic quadrangle map on a high resolution color scanner. The original scanning resolution was 500 dots per inch and the original color depth was 24 bits per pixel. The raw scanned image was archived to CD-ROM as a TIFF file of approximately 400 Mb in size. Post scanning processing included rotation of the raw image for proper orientation and conversion from 24-bit to 8-bit color depth.
2. The processed image file is then registered to the Kentucky Single Zone coordinate system by manually visiting the sixteen 2.5 minute grid ticks and mapping their image coordinates in inches to their corresponding target coordinates in U.S Survey Feet. A link table file is then created containing the sixteen registration points formatted as follows:

SOURCE-X SOURCE-Y TARGET-X TARGET-Y

3. The color table of the image file is automatically reduced from 256 colors down to the 13 colors shown in the above color map table. Each image is then manually edited for cell color distribution to refine image clarity and quality.
4. The image file is then rectified to the target coordinate system via the link table data using a 3rd-order polynomial transformation. The cell size for the output image was set to 6.6667 feet during the rectification process and achieved with nearest neighbor sampling.
5. Each image file was manually inspected for post-rectification color clarity and quality.
6. Each rectified image file was inspected for spatial accuracy by manually testing each 2.5-minute grid tick and comparing the actual post-rectification positions to their corresponding theoretical positions in the reference coordinate system. The maximum allowable error was no greater than 16 feet for any individual grid tick. The results of this testing is presented in Appendix B. Grid tick sample locations are based on the following point sequence:

1	2	3	4
8	7	6	5
9	10	11	12
16	15	14	13
