

# Examples: Administrative Metadata (Issue)

**Administrative metadata can include information about preservation, rights and access, and technical issues. A lot of it is interspersed and overlapping with and within the descriptive metadata.**

This is a modified Issue Level XML file. Only one page is represented in this issue. Actual issues, like those of 4 pages or more, would have repeating tag sets for each page in the *descriptive metadata* under <dmdSec ID="pageModsBib1">; *file section* <fileGrp ID="pageFileGrp1">, and *structural map* <div TYPE="np:page" DMDID="pageModsBib1">.

All XML pages begin with a header that looks similar to this...
