

Examples: Structural Metadata (Issue)

This is a modified Issue Level XML file. Only one page is represented in this issue. Actual issues, like those of 4 pages or more, would have repeating tag sets for each page in the *descriptive metadata* under <dmdSec ID="pageModsBib1">; *file section* <fileGrp ID="pageFileGrp1">, and *structural map* <div TYPE="np:page" DMDID="pageModsBib1">.

All XML pages begin with a header that looks similar to this...

<!--LOC DTD-->

<?xml version="1.0" encoding="UTF-8"?>

<mets TYPE="urn:library-of-congress:ndnp:mets:newspaper:issue" PROFILE="urn:library-of-congress:mets:profiles:ndnp:issue:v1.5" LABEL="Hopkinsville Kentuckian, 1910-02-24" xmlns:mix="http://www.loc.gov/mix" xmlns:ndnp="http://www.loc.gov/ndnp" xmlns:premis="http://www.oclc.org/premis" xmlns:mods="http://www.loc.gov/mods/v3" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xmlns:xlink="http://www.w3.org/1999/xlink" xmlns="http://www.loc.gov/METS/" >

<!--METS HEADER-->

<metsHdr CREATEDATE="2008-01-30T23:16:28">

      </mods:mods>
    </xmlData>
  </mdWrap>
</dmdSec>

```

Tags in red provide the structure of pages within the issue. <mods:start> identifies the sequence (sort order) and <mods:number> identifies the page number. <mods:number> is omitted for unpaginated pages.

The Reel Sequence Number identifies the location (provenance) of the page image within the entire reel. Some systems will sort by this number though it has no bearing on page or issue order.

**These sections represent the structure of
the each derivative file and their order
within the issue and reel**

<!--FILE SECTION-->
