

University of Kentucky Public Opinion Poll on Tobacco Issues

Summary Report*
August 1999

Overview

Kentuckians' views on tobacco issues were addressed via telephone surveys by the UK Survey Research Center from July 15 until August 12, 1999. The UK College of Nursing placed tobacco-related questions on the Kentucky Survey. The purpose of the survey was to learn about public views on social, political and economic issues affecting Kentucky residents. Households were selected using random-digit dialing, a procedure giving every residential telephone line in Kentucky an equal probability of being called. Respondents are representative of state demographics, with a slight over-representation of women. The margin of error is approximately ± 3.9 percentage points at the 95 percent confidence level.

Workplace Smoking Policies
