This is how Benjamin Franklin responded when he was asked what type of government had been created by the Constitutional Convention of 1787. Yet at the very moment of its triumph, democracy in the 21st century has become imperiled at home and abroad. This class will examine these developments. It will review the basic principles of democracy and examine the ideas that influenced America's founders in fashioning our democratic order. Members of the class will be encouraged to discuss their own ideas about democracy and its current prospects.

What was it like to be an ordinary German during the twenties, thirties and forties? What effects did the war have on families, culture and religion? In this exploration of World War II we will consider these questions and try to discover some causes and effects.

This is a class that deals with the life and exploits of Daniel Boone from his youth in Pennsylvania to his adventures in Kentucky. Boone said, “Heaven Must Be A Kentucky Kind of Place.” His life was so extraordinary and vital to the development of Kentucky. He spent time in Kentucky as a long hunter and assisted in opening up Kentucky through the construction of Boone's Trace. His adventures during the Revolutionary War against Native Americans at Boonesborough and around Kentucky are legendary. We will follow his life to his final days in Missouri. By learning about Boone we will learn a great deal about the settlement and early history of Kentucky.

The Case for Plant “Thinking”
Instructor: Jack Furlong
Dates and Times: Wednesdays, October 6 - November 10
1:30 - 3 p.m.
Location: Online Zoom Course
Maximum Enrollment: 20 | Course Fee: $30

For many of us, thinking plants are the stuff of fairy tales and Disney movies, hardly a topic for serious adult concern. However, over the last six years, credible scientists have published books with titles like What A Plant Knows; The Language of Plants; The Hidden Life of Trees; Finding the Mother Tree. In addition, both a popular biography (Braiding Sweetgrass) and a Pulitzer Prize winning novel (The Overstory) take the wonders of plant life as a major theme. Why such interest from functional adults? Owing to the Cognitive Revolution in the late 1980’s, and subsequent research on animal thinking, some scientists became skeptical of the common assumption that plants are merely blind chemical machines; that curiosity has led to the recent burgeoning research in plant learning and problem solving. It has also to some extent freed up the literary environment for plant-themed biographies and novels. In this course, we will explore the evidence for plant cognition (‘thinking’) without attempting to persuade but rather to invite discussion, reflection, and critique. We will end by addressing more deeply an ethical question that will have been with us throughout the course: assuming that computational complexity comes with plant life, would we owe some kind of duty to these organisms?
